Alabama National Guard  
c/o: Mr. William Turk  
P.O. Box 3711  
Montgomery, AL 36109-0711

Dear Mr. Turk:

RE: Alabama National Guard Site  
Organizational Maintenance Shop (OMS-28)  
1622 South Broad Street  
Mobile, Mobile County, Alabama  
Groundwater Incident No. GW 07-01-02

The Alabama Department of Environmental Management is in receipt of the "Supplemental Comprehensive Investigation Groundwater Monitoring Report" dated August 2009. Upon review of the report, the following was determined:

- In the April 2009 report the following COCs were detected above ADEM's PSVs: Benzene, Naphthalene, PCE, and TCE.
- The reports recommend conducting the remaining sampling event to fulfill the 4 events needed for an ARBCA assessment and complete the ARBCA assessment of the OMS-28 site to determine further actions. The Department is in agreement with this recommendation. However, due to the PCE and TCE concentrations increasing, the site will not be able to reach closure until these concentrations show a decreasing trend. The ARBCA assessment should also be carried to the RM-2 level due to groundwater being less than ten feet below ground surface.

If there are any questions, please do not hesitate to contact me at 334/270- 5665 or by Email at [icreeves@adem.state.al.us](mailto:icreeves@adem.state.al.us).

Sincerely,

A handwritten signature in black ink that reads "Chad Reeves". The signature is written in a cursive style with a long, sweeping underline.
