1.0 INTRODUCTION

Aerostar Environmental Services, Inc. (AEROSTAR) under contract to the United States Army Corps of Engineers (USACE)-Mobile District, has completed field activities and data collection for the fourth of five groundwater sampling events scheduled at the Alabama Army National Guard (AANG) Organizational Maintenance Shop (OMS) Number 28, herein identified as OMS-28 located at 1622 South Broad Street on the Brookley Complex, Mobile, Mobile County, Alabama (see **Figure 1, Site Location Map**).

Please note that the AANG changed the OMS to a Field Maintenance Shop (FMS) several years ago. However, the Alabama Department of Environmental Management's (ADEM) official name for the site is OMS-28 and all previous investigations at the site, including the underground storage tank (UST) removal and investigation, have been designated as OMS-28. Therefore, to avoid confusion, the AANG continues to refer to the site as OMS-28 in all documentation relating to environmental investigations at the site.

This investigation was conducted under the authority of the USACE-Mobile District, Contract Number W91278-06-D-0066, Task Order Number 0015 Modification 001. All project activities were conducted in accordance with the previously approved March 2008 Work Plan (WP). The scope-of-work for each OMS-28 groundwater monitoring event includes:

- Collection of depth-to-water measurements and groundwater samples for laboratory analysis
- Preparation of potentiometric and groundwater flow figures
- Presentation and discussion of groundwater analytical results including distribution and comparison to existing action levels
- Comparison of data collected during the current groundwater-monitoring event with previously completed groundwater flow and analytical data
- Recommendations based on results of monitoring activities

This report is intended to satisfy the requirements of the ADEM letter dated June 28, 2007, and is the fourth of five Supplemental Comprehensive Investigation Groundwater Monitoring Reports.

2.0 PROJECT DESCRIPTION

2.1 Site Description

OMS-28 is located in Mobile County, near downtown Mobile at 1622 South Broad Street, between U.S. Interstate Highway 10 and Mobile Bay. The property is relatively flat with an elevation of approximately 20 to 30 feet above mean sea level (MSL). The subject property is located in Section 1, Township 4 South, Range 1 West and at approximate location of Longitude 88° 03' 42" West and Latitude 30° 39' 11" North within the Brookley Complex, as depicted in **Figure 1** and **Figure 2, Project Site Map**. The OMS-28 site is bordered by U.S. Interstate Highway 10 to the west and north; Fort Floyd A. McCorkle AANG facility building to the east; and Farmer Fresh Produce, Masonite, Inc., and SpillTech, Inc. to the south. The surface features consist of vegetative cover comprised of oak trees, scrub trees, grasses, and brush. No structures are present on the OMS-28 study site; however, the AANG facility is located approximately 250 feet east of the site. The nearest residential structure is approximately 250 feet northeast of the site.

Facilities at the Brookley Complex include runways and maintenance areas for aircraft, underground and aboveground fuel storage facilities, associated buildings, roads, housing, and landfills. No human consumption or agricultural wells are located within the boundaries of the Brookley Complex.

The Brookley Complex is designated by the Federal Aviation Administration (FAA) as operating with a Part 139 certification. The property is now owned by the Mobile Airport Authority (MAA) and the University of South Alabama (USA). The Brookley Complex is currently used as an industrial complex and airport by the MAA. The USA uses the facility as a learning center, golf course, and housing area.

2.2 Site Background and History

Trichloroethene (TCE) impacted groundwater was inadvertently identified at the AANG OMS-28 site in August 2005 during a Secondary Investigation Addendum and UST Alabama Risk Based Corrective Action (ARBCA) being conducted for a previously completed, and unrelated, UST closure. Subsequent investigations to characterize the soil and groundwater conditions at the OMS-28 site have delineated the horizontal and vertical extent of dissolved TCE. The current groundwater monitoring network consists of nine (9) Type II shallow monitoring wells and three (3) Type III double cased deep monitoring wells. Groundwater flow has been relatively consistent in a north-northeast direction and TCE-impacted groundwater remains confined to the central portion of the site.

This report documents the results and findings of the fourth of five groundwater monitoring events conducted to gather sufficient data to prepare an ARBCA evaluation of the site. Data collected during this most recent (March 18-19, 2010) groundwater monitoring event and previous monitoring events at the OMS-28 site are included in the ADEM Natural Attenuation Monitoring Report (Appendix A). Details concerning the previously completed investigations are included in the previously submitted Comprehensive Site Investigation Report (AEROSTAR April 2007) and Supplemental Comprehensive Investigation Reports (AEROSTAR November 2008).

3.0 ENVIRONMENTAL ACTIVITIES

3.1 Activities This Reporting Period

Activities conducted during the March 18 and 19, 2010 site visits included the fourth of five groundwater gauging and sampling events. A completed Natural Attenuation Monitoring Report form is included as **Appendix A**.

3.2 Depth to Water Measurements and Monitoring Well Purging

On March 18, 2010, prior to collecting groundwater samples, static water levels were measured in OMS-28 monitoring wells MW-5, MW-6, MW-8, MW-9, MW-12, and OMS-28-1 through OMS-28-7 using an electronic water level indicator prior to purging and sampling activities. Water levels were measured to the nearest 0.01 foot from the top of each well casing for comparison to previously surveyed well casing heights.

In order to obtain valid, representative groundwater samples, each well was purged prior to collecting samples using a peristaltic pump per the approved work plan (AEROSTAR March 2008). Dedicated Teflon tubing was used at each well location. The total water column was determined by subtracting the depth to the top of the water column from the total depth of the well. The total purge volume for each well was at least three times the well volume in gallons. Purge water generated during sampling was containerized and stored at an approved onsite location as investigation derived waste (IDW).

Remediation through natural attenuation (RNA) data including pH, temperature, conductivity, turbidity, and dissolved oxygen (DO) were measured and recorded during purging. Stabilization of these parameters was assumed when successive measurements after each well volume varied by 10% or less. Purging continued until these parameters were stabilized. **Table 1, RNA Field Measurements** contains RNA measurements for the March 2010 and past gauging and sampling events conducted in May 2009, December 2008, and July 2008.

3.3 Monitoring Well Sampling

On March 18, 2010, groundwater samples were collected from MW-5, MW-6, MW-9, MW-12, OMS-28-1, OMS-28-2, OMS-28-6, and OMS-28-7. On March 19, 2010, groundwater samples were collected from MW-8, OMS-28-3, OMS-28-4, and OMS-28-5. Following purging stabilization, groundwater samples were collected in accordance with the work plan approved in March 2008. All samples were logged using proper chain-of-custody protocol, then placed on ice in a cooler for delivery to Gulf Coast Analytical Laboratories, Inc., in Baton Rouge, Louisiana for analysis of Target Compound List (TCL) Volatile Organic Compounds (VOCs) by EPA Method 8260. Copies of the groundwater laboratory analytical reports and chains-of-custodies are provided in **Appendix B**.

3.4 Investigation Derived Waste Handling

During the course of the field investigation, IDW purge water was generated and handled in accordance with the Investigation Derived Waste Management Plan (IDWMP). The IDWMP addressed the requirements of the National Contingency Plan (NCP) along with the U.S. Environmental Protection Agency's (EPA) interpretation of these plans. All IDW generated during this groundwater sampling event was stored and secured onsite behind a locked fence in one properly labeled, sealed 55-gallon steel drum.

4.0 FINDINGS

4.1 Groundwater Elevation and Flow Direction

Depth to the groundwater at the site was measured on March 18, 2010, with an electronic groundwater level indicator. The depth to the groundwater from the top of casing (TOC) was recorded and this distance was subtracted from TOC elevations for each well. The calculated groundwater elevation in the shallow wells (MW-5, MW-6, MW-8, MW-9, MW-12, OMS-28-2, OMS-28-3, OMS-28-5, and OMS-28-7) during the gauging event varied from 20.14 feet to 24.49 feet national geodetic vertical datum (NGVD). The calculated groundwater elevation in the deep wells (OMS-28-1, OMS-28-4, and OMS-28-6) during the gauging event varied from 2.78 feet to 5.10 feet NGVD. A review of the water level measurements collected on March 18, 2010 from the shallow wells on site indicates that the groundwater flow direction at the OMS-28 site is estimated to the north-northwest. This flow direction is consistent with the flow direction determined during the previous sampling events conducted in May and September/November 2009.

Groundwater and elevation data, including historic elevation data are provided in **Table 2**. **Figure 3A, Shallow Potentiometric Surface Map, March 2010** illustrates groundwater flow direction estimated during the March 18, 2010 groundwater sampling event. **Figure 3B, Shallow Potentiometric Surface Map, November 2009** and **Figure 3C, Shallow Potentiometric Surface Map, May 2009** illustrate the estimated groundwater flow direction calculated during the most recent groundwater sampling events.

4.2 Groundwater Analytical Results

Laboratory analytical results for the groundwater samples collected on March 18 and 19, 2010 with a breakdown of individual VOC concentrations, including the analytical results from the previous sampling events of September 2009, May 8, 2009 and December 10 and 11, 2008, and July 1, 2008 are summarized in **Table 3, Groundwater Sample Results**.

Figure 4A, Trichloroethene Groundwater Plume, March 2010 illustrates the distribution of dissolved-phase TCE for the March 18 and 19, 2010 sampling event. **Figure 4B, Trichloroethene Groundwater Plume, September 2009** and **Figure 4C Trichloroethene Groundwater Plume, May 2009** illustrate the historical distribution of dissolved-phase TCE at the site.

During the previous groundwater sampling events of May and September 2009, benzene, naphthalene, tetrachloroethene (PCE), and TCE were detected in one or more samples at levels that exceeded ADEM ARBCA Preliminary Screening Values (PSVs). Volatile organic compounds that exceeded the ADEM ARBCA PSV during the March 18 and 19, 2010 sampling event are discussed below.

- PCE was detected during the March 18 and 19, 2010 sampling event in one of the twelve groundwater samples collected. The sample collected from monitoring well OMS-28-5 exhibited a PCE concentration of 0.081 mg/L which is above the ADEM PSV of 0.005 mg/L established for PCE. The PCE concentration in OMS-28-5 has increased since the September 24, 2009 sampling event.
- TCE was detected during the March 18 and 19, 2010 sampling event in three of the twelve groundwater samples collected. The samples collected from monitoring wells MW-8, OMS-28-3 and OMS-28-5 exhibited TCE concentrations of 0.041 mg/L, 0.012 mg/L, and 0.051 mg/L, respectively. These concentrations are above the ADEM PSV of 0.005 mg/L established for TCE. The TCE concentrations in MW-8 and OMS-28-5 have increased since the September 24, 2009 sampling event. The TCE concentrations in OMS-28-3 have decreased since the September 24, 2009 sampling event.

4.3 Discussion

Table 3 summarizes the groundwater analytical results while **Figure 2** illustrates the sample locations for the March 18 and 19, 2010 sampling event. The groundwater laboratory analytical reports for all groundwater samples collected during this investigation and associated chains-of-custody are provided in **Appendix B**. Contaminants detected in groundwater samples (including estimated “J” values) collected during this investigation are identified as acetone, benzene, isopropylbenzene, PCE, TCE, and (cis)-1,2-dichloroethene. Contaminants detected in groundwater samples (including estimated “J” values) collected during this investigation that exceeded an ADEM PSV are identified as PCE, and TCE.

The benzene concentration of 0.00184J mg/L that was detected in the groundwater sample collected from MW-6 on March 18, 2010, does not exceed the ADEM drinking water PSV for benzene of 0.005 mg/L. Previously, benzene was detected at a concentration of 0.00555 mg/L in the groundwater sample collected from monitoring well MW-6 on May 8, 2009, which exceeded the ADEM drinking water PSV for benzene, but was below the SSTL calculated in the ARBCA for 28 Pit #2, dated 1 September 2005 of 0.0311 mg/L. Benzene concentrations at OMS-28 will be monitored until updated SSTLs can be calculated in the ARBCA evaluation of the site.

The PCE concentration of 0.081 mg/L detected in the groundwater sample collected from monitoring well OMS-28-5 exceeded the ADEM drinking water PSVs for PCE of 0.005 mg/L.

The TCE concentrations of 0.041 mg/L, 0.012 mg/L, and 0.051 mg/L that were detected in the groundwater samples collected from monitoring wells MW-8, OMS-28-3 and OMS-28-5, respectively, exceeded the ADEM drinking water PSV for TCE of 0.005 mg/L.

No other chemicals of concern exceeded ADEM drinking water PSVs or EPA regional screening levels (EPA RSL) for drinking water in any of the groundwater samples collected during this investigation.

It should be noted that a “J” flag attached to any concentration indicates that the value given is an estimated value determined by the analytical laboratory. Additionally, concentrations detected in the duplicate samples collected during this investigation correlate with the results of the original samples.

Groundwater analytical results of the samples collected on March 18 and 19, 2010 show shallow monitoring wells MW-8, OMS-28-3, and OMS-28-5 had at least one concentration of PCE and TCE that exceeded an ADEM drinking water PSV.

A visual representation of the estimated TCE plume as of March 18 and 19, 2010 (groundwater with dissolved TCE concentration equal to or greater than 0.005 mg/L) is presented as **Figure 4A**. Visual representations of the estimated TCE plume for the previous sampling events conducted in September and May 2009 are presented as **Figures 3B and 3C**, respectively.

A comparison of the September 2009 TCE and March 2010 TCE groundwater results indicates that TCE concentrations in the shallow well OMS-28-3 have decreased, while the TCE concentrations in the shallow wells OMS-28-5 and MW-8 have increased.

Review of the groundwater analytical results reveals that no chemical of concern was detected in any deep well at a concentration that exceeded an ADEM drinking water PSVs during the March 2010 sampling event. Contamination in the deeper aquifer does not appear to be a concern at OMS-28.

5.0 SUMMARY

During this investigation, only two chemicals of concern, PCE and TCE, were detected in the groundwater at concentrations that exceeded their respective ADEM drinking water PSVs. A comparison of this sampling event and previous sampling events reveals that dissolved-phase VOC concentrations have generally remained stable at the site.

Exceedences of ADEM drinking water PSVs were detected only in the Type II shallow monitoring wells located on site in the southeastern portion of the OMS-28 site. No dissolved chemicals of concern in any deep wells (OMS-28-1, OMS-28-4, and OMS-28-6) at the site exceeded ADEM PSVs.

Non-aqueous phase liquid (NAPL) was not encountered in groundwater samples collected from OMS-28 monitoring well during the March 2010 sampling event and has never been encountered during any previous event.

6.0 RECOMMENDATIONS

AEROSTAR makes the following recommendations in connection with the Supplemental Comprehensive Investigation:

- Conduct one additional groundwater sampling event (September 2010) to collect information needed to complete an ARBCA assessment of the OMS-28 site;
- Complete an ARBCA assessment of the OMS-28 site to determine further actions following the September 2010 sampling event.

APPENDIX A

Natural Attenuation Monitoring Report Form

NATURAL ATTENUATION MONITORING REPORT

Facility Name: USACE OMS-28 Year: 2010
Facility I. D. No.: NA Quarter: 1st biannual
Incident No.: GW 07-01-02 Reporting Period: 1/01/09 - 6/30/10
Consulting Firm: Aerostar, Inc. Project Manager: Geoff Reichold, P.G.

Section 1 - Site Summary

Purpose of Monitoring:

- X Plume Characterization
 - Confirmation Monitoring
 - Remediation by Natural Attenuation
(Approved Corrective Action Plan)

Site Status:

- Assessment Complete
 - ARBCA Evaluation Conducted
 - Active UST's
 - Site Classification
 - Free Product ever present

Number of Groundwater Monitoring Wells:

- Piezometers
 - 9 Type II
 - 3 Type III
 - Other

Number of Water Supply Wells:

- 0 Public (within 1 mile radius of site)

0 Private (within 1000 foot radius of site)

Other (Explain) _____

Status of Waste Water Disposal:

Quantity (gallons)

Disposal Method

Stored On-site

Disposal Documentation

Comments:

ATTACH A BRIEF SUMMARY OF THE ARBCA EVALUATION INCLUDING THE SSTL'S DEVELOPED FOR THE SITE AND THE LOCATION OF THE POINT OF COMPLIANCE.

NATURAL ATTENUATION MONITORING REPORT

Facility Name: USACE OMS-28 Year: 2010
Facility I. D. No.: NA Quarter: 1st biannual
Incident No.: GW 07-01-02 Reporting Period: 1/01/09 - 6/30/10
Consulting Firm: Aerostar, Inc. Project Manager: Geoff Reichold, P.G.

Section 2 - Site Maps

Attach site map(s) illustrating all well locations, location of former and/or current UST system(s), utilities, adjacent properties, receptors, current and most likely future land use of site and adjacent properties, Point of Compliance, buildings and other pertinent features. All maps should contain a north arrow and should be to scale.

Section 3 - Well Inventory Tables

Monitoring Wells					
Well ID	Date Installed	Diameter (inches)	Screened Interval (feet bgs)		Depth to Water (feet bgs)
MW-5	1994	2.0	3.3	13.3	4.72
MW-6	1994	2.0	2.3	12.3	3.66
MW-8	1994	2.0	4.8	14.8	4.51
MW-9	2006	2.0	7.4	17.4	5.09
MW-12	2006	2.0	5.6	15.6	5.80
OMS-28-1	2008	2.0	70.0	80.0	21.30
OMS-28-2	2008	2.0	10.0	20.0	10.49
OMS-28-3	2008	2.0	10.0	20.0	7.85
OMS-28-4	2008	2.0	66.0	76.0	25.21

Water Supply Wells

Well ID	Date Installed	Diameter (inches)	Screened Interval (feet bgs)		Depth to Water (feet bgs)	Well Use

NATURAL ATTENUATION MONITORING REPORT

Facility Name: USACE OMS-28
Facility I. D. No.: NA
Incident No.: GW 07-01-02
Consulting Firm: Aerostar, Inc.

Year: 2010
Quarter: 1st biannual
Reporting Period: 1/01/09 - 6/30/10
Project Manager: Geoff Reichold, P.G.

INDICATE SAMPLING PARAMETERS COLLECTED/MEASURED DURING EACH MONITORING EVENT. CHECK APPROPRIATE BOXES INDICATING SAMPLING PARAMETERS.

NATURAL ATTENUATION MONITORING REPORT

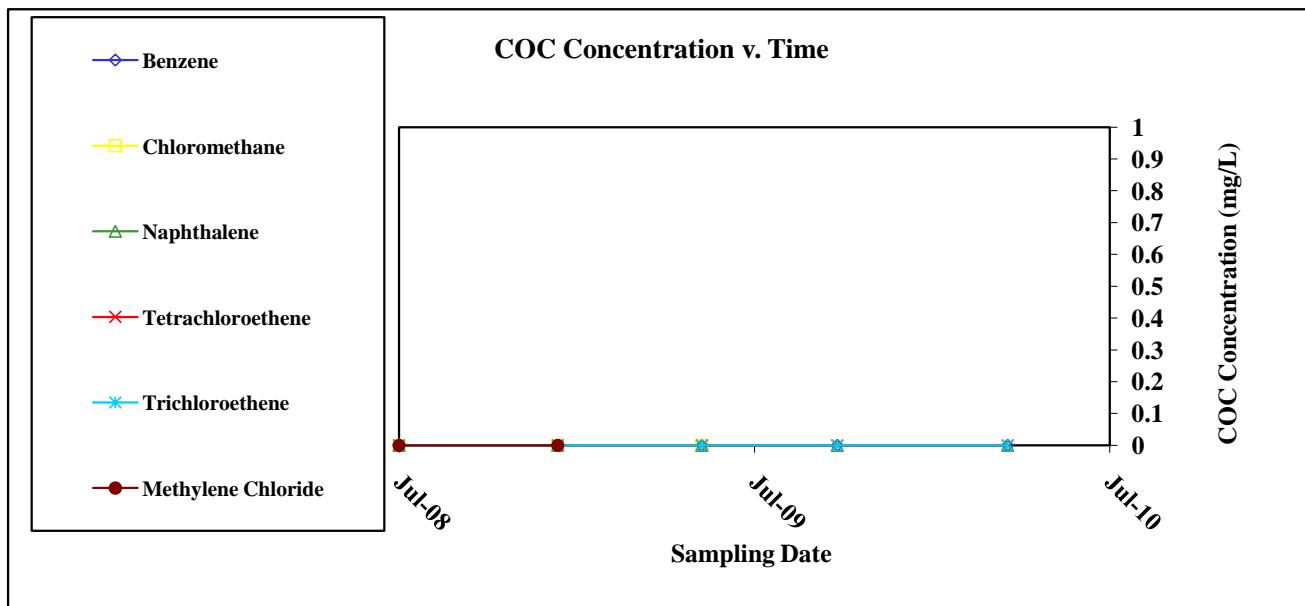

Facility Name: USACE OMS-28
Facility I. D. No.: NA
Incident No.: GW 07-01-02
Consulting Firm: Aerostar, Inc.

Year: 2010
Quarter: 1st biannual
Reporting Period: 1/01/09 - 6/30/10
Project Manager: Geoff Reichold, P.G.

ATTACH CHAIN OF CUSTODY'S AND ORIGINAL LABORATORY SHEETS FOR THIS MONITORING EVENT. ENTER EPA METHOD NUMBER FOR LABORATORY METHODS. PROVIDE DETAILED SAMPLING METHODOLOGY FOR ALL FIELD ANALYTICAL METHODS. ATTACH ADDITIONAL PAGES AS NECESSARY TO DESCRIBE FIELD METHODS.

CASE NARRATIVE

Client: Aerostar **Report:** 210032314

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the sample cross-reference page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

VOLATILES MASS SPECTROMETRY

In the SW-846 8260B analysis for analytical batch 428650, the MS/MSD exhibited recovery and RPD failures. All LCS/LCSD recoveries and RPDs are acceptable.

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations Utilized in this Report

ND	Indicates the result was Not Detected at the specified RDL
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
RDL	Reporting Detection Limit
00:00	Reported as a time equivalent to 12:00 AM

Reporting Flags Utilized in this Report

J	Indicates an estimated value
U	Indicates the compound was analyzed for but not detected
B	(ORGANICS) Indicates the analyte was detected in the associated Method Blank
B	(INORGANICS) Indicates the result is between the RDL and MDL

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with [ISO Guide 25](#) and [NELAC](#), this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with the NELAC standard and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer-readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.
