QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
M1- Compound response manually integrated because
Target system did not integrate.
M2- Compound response manually integrated because
Target system integrated incorrectly.
M3- Compound response manually integrated because
Target system integrated incorrect peak.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
M1- Compound response manually integrated because
Target system did not integrate.
H - Operator selected an alternate compound hit.

FIT = %RSD For Average Curve And Calibration Coefficent For Linear And Quadratic

Curve Types: A - Averged, L - Linear Regression, W - Weighted Linear, Q - Quadratic

For curve types L and Q, the RRF and RSP (Response) are shown on separate lines to allow for evaluation against minimum RRF

$\overline{RF}$ = Mean Response Factor For Average Curve

m,b = Slope and Intercept For Linear Curve

A,B,C = Coefficents For Quadratic Curve

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
M1- Compound response manually integrated because Target system did not integrate.

FIT = %RSD For Average Curve And Calibration Coefficent For Linear And Quadratic

Curve Types: A - Averged, L - Linear Regression, W - Weighted Linear, Q - Quadratic

For curve types L and Q, the RRF and RSP (Response) are shown on separate lines to allow for evaluation against minimum RRF

$\overline{RF}$ = Mean Response Factor For Average Curve

m,b = Slope and Intercept For Linear Curve

A,B,C = Coefficents For Quadratic Curve

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
M2- Compound response manually integrated because
Target system integrated incorrectly.
H - Operator selected an alternate compound hit.

QC Flag Legend

a - Target compound detected but, quantitated amount
Below Limit Of Quantitation(BLOQ).
M1- Compound response manually integrated because
Target system did not integrate.
M2- Compound response manually integrated because
Target system integrated incorrectly.

QC Flag Legend

A - Target compound detected but, quantitated amount exceeded maximum amount.
M1- Compound response manually integrated because Target system did not integrate.
M2- Compound response manually integrated because Target system integrated incorrectly.

Sample Delivery Details / Laboratory Receipt

Delivered Directly to Lab:
Method of Shipment: Fed EX
Analytical Lab: Gulf Coast
Lab Receipient:

Shipped: XX
Airbill #: 8024 7813 4725
Location: Baton Rouge LA
Date: Time:

1.) Sample Type (SA) Codes: N = Normal Sample, TB = Trip Blank (-c) Sample, FD = Field Duplicate (-a) Samples, FR = Field Replicate (-b) Samples, EB = Equipment Blank (-d) Samples, MS = Matrix Spike Samples, SD = Matrix Spike Duplicate Samples

2.) Matrix Codes: GS = Soil Gas, WG = Groundwater, WS = Surface Water, SO = Soil, SE = Sediment, SL = Sludge, SS = Surface Soil Samples, WQ = Aqueous Blank Samples (trip, equipment, ambient, etc), SQ = Soil Blanks

AECOM Project Name: ARNG OMS 28 Mobile AL

AECOM Project Number: 60439687 / 2.3

Project Manager: Steve Holt

Purchase Order Number: 70775

Analytical Data To: Vasi Kourlas and Dwight Parks

SAMPLE RECEIVING CHECKLIST

217051110

SAMPLE DELIVERY GROUP 217051110	
Client PM AMK 4838 - AECOM	**Transport Method** FED EX
Profile Number 264814	**Received By** Savage, Tiffany R
Line Item(s) 1 - W - VOCs 2 - S - VOCs	**Receive Date(s)** 05/11/17

CHECKLIST	YES	NO	NA
Samples received with proper thermal and chemical preservation?	☑	☐	☐
Radioactivity is <1600 cpm? If no, record cpm value in notes section.	☑	☐	☐
When used, were custody seals intact?	☑	☐	☐
COC relinquished and complete (including sample IDs, collect dates/times, and sampler name)?	☑	☐	☐
Short holds or RUSH samples received?	☐	☑	☐
All containers received in good condition and within hold time?	☑	☐	☐
All sample labels and containers received match the chain of custody?	☐	☑	☐
Preservation checked at receipt? Exceptions: VOC, Coliform, TOC, Oil and Grease, DOC	☐	☐	☑
Preservative added to any containers?	☐	☐	☑
VOC water containers received with headspace < 6mm?	☑	☐	☐
Received filtered sample volume for dissolved analysis?	☐	☐	☑
Trip blank present in all coolers containing VOC waters?	☑	☐	☐
Samples collected in containers provided by GCAL?	☑	☐	☐

Revision 1.6

Appendix B7
GCAL Report 217052202 dated May 26, 2017

ANALYTICAL RESULTS

PERFORMED BY

GCAL, LLC
7979 Innovation Park Dr.
Baton Rouge, LA 70820

Report Date 05/26/2017

GCAL Report 217052202

Project ARNG OMS 28 / 60439687

Deliver To	***Additional Recipients***
Steve Holt AECOM 10 Patewood Drive, Bldg. VI Suite 500 Greenville, SC 29615 864-234-2260	NONE

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
DL	Diluted analysis – when appended to Client Sample ID
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*****	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
P	RPD between primary and confirmation result is greater than 40

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: AECOM **Report:** 217052202

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

VOLATILES MASS SPECTROMETRY

In the EPA 8260B analysis for analytical batch 611089, the LCS/LCSD RPD is above the control limit for Acetone, 1,1-Dichloroethane, trans-1,2-Dichloroethene, Methylene chloride, tert-Butyl methyl ether (MTBE) and Methyl Acetate.

VOLATILE ORGANICS INSTRUMENT PERFORMANCE CHECK

BROMOFLUOROBENZENE (BFB)

Report No:	217052202	Tune ID:	1000
GC Column:	RTX-VMS-30 ID .25 (mm)	Instrument ID:	MSV13
Injection Vol.:	1.0 (µL)	Lab File ID:	2170525/d4540
Analyst:	JCK	Analytical Batch:	611089
Analysis Date:	05/25/17 Time: 0738	Analytical Method:	EPA 8260B

m / e	*ION ABUNDANCE CRITERIA*	*% Relative Abundance*			
50	15.0 - 40.0% of mass 95	21.43	(	)	
75	30.0 - 60.0% of mass 95	50.69	(	)	
95	Base Peak, 100% relative abundance	100	(	)	
96	5.0 -9.0% of mass 95	6.62	(	)	
173	Less than 2.0% of mass 174	.75	(.91	)	1
174	50.0 - 120.0% of mass 95	83.47	(	)	
175	5.0 - 9.0% of mass 174	6.11	(7.33	)	1
176	95.0 - 101.0% of mass 174	80.7	(96.69	)	1
177	5.0 - 9.0% of mass 176	5.35	(6.63	)	2

1- Value is % mass 174 2- Value is % mass 176

FIT = %RSD For Average Curve And Calibration Coefficent For Linear And Quadratic

$\overline{RF}$ = Mean Response Factor For Average Curve

Curve Types: A - Averged, L - Linear Regression, W - Weighted Linear, Q - Quadratic

m,b = Slope and Intercept For Linear Curve

For curve types L and Q, the RRF and RSP (Response) are shown on separate lines to allow for evaluation against minimum RRF

A,B,C = Coefficents For Quadratic Curve

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
DL	Diluted analysis – when appended to Client Sample ID
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
P	RPD between primary and confirmation result is greater than 40

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: AECOM **Report:** 217051044

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

See subcontract laboratory report case narrative.

Analytical Report for Service Request No: K1704509

Anna Kinchen
Gulf Coast Analytical Labs
7979 Innovation Park Dr.
Baton Rouge, LA 70820

RE: ARNG OMS 28 Mobile AL

Dear Anna,

Enclosed are the results of the sample(s) submitted to our laboratory May 05, 2017
For your reference, these analyses have been assigned our service request number **K1704509.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3364. You may also contact me via email at howard.holmes@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Howard Holmes

Table of Contents

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

ALS ENVIRONMENTAL

Client:	Gulf Coast Analytical Labs GCAL	**Service Request No.:**	K1704509
Project:	ARNG OMS 28 Mobile AL	**Date Received:**	05/05/17
Sample Matrix:	Water		

Case Narrative

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Five water samples were received for analysis at ALS Environmental on 05/05/17. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4ºC upon receipt at the laboratory.

Volatile Organic Compounds by EPA Method 8260-SIM

Surrogate Exceptions:
The upper control criterion was exceeded for Toluene-d8 in sample OMS-28-GW32-12-S. The target analyte was not associated with the surrogate in question. The quality of the sample data was not significantly affected. No further corrective action was appropriate.

No other anomalies associated with the analysis of these samples were observed.

1	Vinyl Chloride	1.33		0.00	62	719	24.13	24		

Prep Amount:	10 ml	**Dilution:**	1.0
Prep Final Vol:	10 ml	**Unit Factor:**	1

Final Concentration = ((Soln Conc x Prep Final Vol x Dilution) / Prep Amount) x Unit Factor

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

IS Ref	Parameter Name	RT	RT Dev	RRT Dev	Quant Mass	Response	Solution Conc	Final Conc	Q	Rpt?
1	Vinyl Chloride	1.33		0.00	62	41	1.32	4.6	U	

Prep Amount:	10 ml	**Dilution:**	1.0
Prep Final Vol:	10 ml	**Unit Factor:**	1

Final Concentration = ((Soln Conc x Prep Final Vol x Dilution) / Prep Amount) x Unit Factor

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
DL	Diluted analysis – when appended to Client Sample ID
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
P	RPD between primary and confirmation result is greater than 40

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Authorized Signature

Case Narrative

Client: AECOM **Report:** 217053112

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

See subcontract laboratory report case narrative.

Analytical Report for Service Request No: K1704732

Anna Kinchen
Gulf Coast Analytical Laboratories
7979 GSRI Avenue
Baton Rouge, LA 70820

RE: ARNG OMS 28 Mobile AL / 60439687.2.3

Dear Anna,

Enclosed are the results of the sample(s) submitted to our laboratory May 11, 2017
For your reference, these analyses have been assigned our service request number **K1704732.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3364. You may also contact me via email at howard.holmes@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Howard Holmes

Table of Contents

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Project:	ARNG OMS 28 Mobile AL/ 60439687.2.3	**Date Received:**	05/11/17
Sample Matrix:	Water		

Case Narrative

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Four water samples were received for analysis at ALS Environmental on 05/11/17. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4ºC upon receipt at the laboratory.

Volatile Organic Compounds by EPA Method 8260-SIM

No anomalies associated with the analysis of these samples were observed.

Appendix B10
GCAL Report 217053111 dated June 8, 2017

ANALYTICAL RESULTS

PERFORMED BY

GCAL, LLC
7979 Innovation Park Dr.
Baton Rouge, LA 70820

Report Date 06/08/2017

GCAL Report 217053111

Project ARNG OMS 28/ 60439687

Deliver To	***Additional Recipients***
Steve Holt AECOM 10 Patewood Drive, Bldg. VI Suite 500 Greenville, SC 29615 864-234-2260	NONE

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
DL	Diluted analysis – when appended to Client Sample ID
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
P	RPD between primary and confirmation result is greater than 40

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Authorized Signature

Case Narrative

Client: AECOM **Report:** 217053111

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

See subcontract laboratory report case narrative.

Sample Summary

Analytical Report for Service Request No: K1705066

Anna Kinchen
Gulf Coast Analytical Laboratories
7979 GSRI Avenue
Baton Rouge, LA 70820

RE: ARNG OMS 28 Mobile AL / 60439687.2.3

Dear Anna,

Enclosed are the results of the sample(s) submitted to our laboratory May 18, 2017
For your reference, these analyses have been assigned our service request number **K1705066.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3364. You may also contact me via email at howard.holmes@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Howard Holmes

Table of Contents

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Client:	Gulf Coast Analytical Labs GCAL	**Service Request No.:**	K1705066
Project:	ARNG OMS 28 Mobile AL/ 60439687.2.3	**Date Received:**	05/18/17
Sample Matrix:	Water		

Case Narrative

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Seven water samples were received for analysis at ALS Environmental on 05/18/17. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4ºC upon receipt at the laboratory.

Volatile Organic Compounds by EPA Method 8260-SIM

No anomalies associated with the analysis of these samples were observed.

1	Vinyl Chloride	1.33		0.00	62	39	1.41	4.6	U	

Prep Amount:	10 ml	**Dilution:**	1.0
Prep Final Vol:	10 ml	**Unit Factor:**	1

Final Concentration = ((Soln Conc x Prep Final Vol x Dilution) / Prep Amount) x Unit Factor

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

Final Conc. Units: ng/L

IS Ref	Parameter Name	RT	RT Dev	RRT Dev	Quant Mass	Response	Solution Conc	Final Conc	Q	Rpt?
1	Vinyl Chloride	1.33		0.00	62	60	2.19	4.6	U	

Prep Amount:	10 ml	**Dilution:**	1.0
Prep Final Vol:	10 ml	**Unit Factor:**	1

Final Concentration = ((Soln Conc x Prep Final Vol x Dilution) / Prep Amount) x Unit Factor

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

Target Compounds

Final Conc. Units: ng/L

IS Ref	Parameter Name	RT	RT Dev	RRT Dev	Quant Mass	Response	Solution Conc	Final Conc	Q	Rpt?
1	Vinyl Chloride	1.33		0.00	62	79	2.90	4.6	U	

Prep Amount:	10 ml	**Dilution:**	1.0
Prep Final Vol:	10 ml	**Unit Factor:**	1

Final Concentration = ((Soln Conc x Prep Final Vol x Dilution) / Prep Amount) x Unit Factor

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

IS Ref	Parameter Name	RT	RT Dev	RRT Dev	Quant Mass	Response	Solution Conc	Final Conc	Q	Rpt?
1	Vinyl Chloride	1.33		0.00	62	217	7.99	8.0	J	

Prep Amount:	10 ml	**Dilution:**	1.0
Prep Final Vol:	10 ml	**Unit Factor:**	1

Final Concentration = ((Soln Conc x Prep Final Vol x Dilution) / Prep Amount) x Unit Factor

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
DL	Diluted analysis – when appended to Client Sample ID
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
P	RPD between primary and confirmation result is greater than 40

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Authorized Signature

Case Narrative

Client: AECOM **Report:** 217053113

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

See subcontract laboratory report case narrative.

Analytical Report for Service Request No: K1704857

Anna Kinchen
Gulf Coast Analytical Laboratories
7979 GSRI Avenue
Baton Rouge, LA 70820

RE: ARNG OMS 28 Mobile AL / 60439687.2.3

Dear Anna,

Enclosed are the results of the sample(s) submitted to our laboratory May 13, 2017
For your reference, these analyses have been assigned our service request number **K1704857.**

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3364. You may also contact me via email at howard.holmes@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Table of Contents

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
E	The result is an estimate amount because the value exceeded the instrument calibration range.
J	The result is an estimated value.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.
H	The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

#	The control limit criteria is not applicable. See case narrative.
J	The result is an estimated value.
E	The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
M	The duplicate injection precision was not met.
N	The Matrix Spike sample recovery is not within control limits. See case narrative.
S	The reported value was determined by the Method of Standard Additions (MSA).
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
W	The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
i	The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
X	See case narrative.
+	The correlation coefficient for the MSA is less than 0.995.
Q	See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

*	The result is an outlier. See case narrative.
#	The control limit criteria is not applicable. See case narrative.
A	A tentatively identified compound, a suspected aldol-condensation product.
B	The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
C	The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
D	The reported result is from a dilution.
E	The result is an estimated value.
J	The result is an estimated value.
N	The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
P	The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
U	The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL. *DOD-QSM 4.2 definition* : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
i	The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
X	See case narrative.
Q	See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

F	The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
L	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
H	The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
O	The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
Y	The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
Z	The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.ALSGlobal.com or at the accreditation bodies web site.
Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/anlayte is offered by that state.

Client:	Gulf Coast Analytical Labs GCAL	**Service Request No.:**	K1704857
Project:	ARNG OMS 28 Mobile AL/ 60439687.2.3	**Date Received:**	05/13/17
Sample Matrix:	Water		

Case Narrative

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Five water samples were received for analysis at ALS Environmental on 05/13/17. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4ºC upon receipt at the laboratory.

Volatile Organic Compounds by EPA Method 8260-SIM

No anomalies associated with the analysis of these samples were observed.

1	Vinyl Chloride	1.33		0.00	62	41	1.43	4.6	U	

Prep Amount:	10 ml	**Dilution:**	1.0
Prep Final Vol:	10 ml	**Unit Factor:**	1

Final Concentration = ((Soln Conc x Prep Final Vol x Dilution) / Prep Amount) x Unit Factor

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

IS Ref	Parameter Name	RT	RT Dev	RRT Dev	Quant Mass	Response	Solution Conc	Final Conc	Q	Rpt?
1	Vinyl Chloride	1.33		0.00	62	39	1.37	4.6	U	

Prep Amount:	10 ml	**Dilution:**	1.0
Prep Final Vol:	10 ml	**Unit Factor:**	1

Final Concentration = ((Soln Conc x Prep Final Vol x Dilution) / Prep Amount) x Unit Factor

U: Undetected at or above MDL
J: Analyte detected above MDL, but below MRL
B: Hit above MRL also found in Method Blank
E: Analyte concentration above high point of ICAL
N: Presumptive evidence of compound

D: Result from dilution
m: Manual integration performed
d: Compound manually deleted
NR: Analyte not reported from this analysis

*: Result fails acceptance criteria
#: Acceptance criteria not applicable
?: Insufficient information to determine acceptance
e: Result >= MRL, but MRL less than low point of ICAL
c: check for co-elution

GCAL Report 218013015 dated February 6, 2018

ANALYTICAL RESULTS

PERFORMED BY

GCAL, LLC
7979 Innovation Park Dr.
Baton Rouge, LA 70820

Report Date 02/06/2018

GCAL Report 218013015

Project ARNG OMS 28/ 60556081

Deliver To	***Additional Recipients***
Steve Holt AECOM 10 Patewood Drive, Bldg. VI Suite 500 Greenville, SC 29615 864-234-2260	NONE

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Authorized Signature

Case Narrative

Client: AECOM **Report:** 218013015

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

MISCELLANEOUS

This report was completed in accordance with DOD QSM 5.0 as specified in the contract.

Q Flag Summary

NO Q FLAGS FOR THIS WORKORDER

Manual Integrations

Manual Integrations for LC and IC (if performed) are documented in the raw data.
No other manual integrations were performed by GCAL.

Summary of Compounds Detected

No analytes were detected for analyses performed by GCAL.

Page intentionally left blank.

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable

Case Narrative

Client: AECOM **Report:** 218013129

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

MISCELLANEOUS

This report was completed in accordance with DOD QSM 5.0 as specified in the contract.

VOLATILE METHOD BLANK SUMMARY

Report No:	218013129	Method Blank ID:	1769807
Matrix:	Water	Instrument ID:	MSV13
Sample Amt:	5 mL	Lab File ID:	2180201/e4274
Injection Vol.:	1.0 (µL)	GC Column:	RTX-VMS-30 ID .25 (mm)
Dilution Factor:	1 Analyst: GDG	Analytical Batch:	628147
Analysis Date:	02/01/18 Time: 1018	Analytical Method:	EPA 8260B

THIS METHOD BLANK APPLIES TO THE FOLLOWING SAMPLES, MS AND MSD

	CLIENT SAMPLE ID	*GCAL SAMPLE ID*	*LAB FILE ID*	*DATE ANALYZED*	*TIME ANALYZED*

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: AECOM **Report:** 218013130

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

MISCELLANEOUS

This report was completed in accordance with DOD QSM 5.0 as specified in the contract.

Q Flag Summary

NO Q FLAGS FOR THIS WORKORDER

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: AECOM **Report:** 218013133

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

MISCELLANEOUS

See subcontract laboratory report case narrative.

Sample Receipt

The following samples were received on January 31, 2018 and were logged in under Katahdin Analytical Services work order number SL0777 for a hardcopy due date of February 12, 2018.

KATAHDIN Sample No.	GCAL Sample Identification
SL0777-1	OMS-28-GW74-15
SL0777-2	OMS-28-GW74-15C
SL0777-3	OMS-28-GW74-33
SL0777-4	OMS-28-GW75-29
SL0777-5	OMS-28-GW89-31
SL0777-6	OMS-28-GW81-18

The samples were logged in for the analyses specified on the chain of custody form. All problems encountered and resolved during sample receipt have been documented on the applicable chain of custody forms.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in this narrative or in the Report of Analysis.

Sample analyses have been performed by the methods as noted herein.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact your Katahdin Analytical Services Project Manager, **Ms. Heather Manz**. This narrative is an integral part of the Report of Analysis.

Organics Analysis

The samples of Work Order SL0777 were analyzed in accordance with "Test Methods for Evaluating Solid Wastes: Physical/Chemical Methods." SW-846, 2nd edition, 1982 (revised 1984), 3rd edition, 1986, and Updates I, II, IIA, III, IIIA, and IIIB 1996, 1998 & 2004, Office of Solid Waste and Emergency Response, U.S. EPA, and/or for the specific methods listed below or on the Report of Analysis.

8260B SIM Analysis

The closing continuing calibration verification standard (CV) (file D0174) had a high response for the target analyte vinyl chloride that resulted in a %D that exceeded the DoD QSM acceptance limit of ±50%. If a closing CV fails, the DoD QSM allows for the analysis of two additional CVs which do not need to be within the 12 hour window. The two additional CV's (files D0175 and D0176) were acceptable, and all three CVs are reported.

There were no other protocol deviations or observations noted by the organics laboratory staff.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Quality Assurance Officer, or their designee, as verified by the following signature.

Leslie Dimond

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

Katahdin Analytical Services, LLC.

Sample Receipt Condition Report

Client: GCAL	KAS PM:	Sampled By: Client

KAS Work Order#: SL0777	KMS Review By: AMH	Received By: JAB
SDG #:	Cooler: 1 of 1	Date/Time Rec.: 1.31.18 910

Receipt Criteria	Y	N	EX*	NA	Comments and/or Resolution
1. Custody seals present / intact?	✓				
2. Chain of Custody present in cooler?	✓				
3. Chain of Custody signed by client?	✓				
4. Chain of Custody matches samples?	✓				
5. Temperature Blanks present? If not, take temperature of any sample w/ IR gun.	✓				Temp (°C): 0.7
Samples received at <6 °C w/o freezing?	✓				Note: Not required for metals (except Hg soil) analysis.
Ice packs or ice present?	✓				
If yes, was there sufficient ice to meet temperature requirements?	✓				The lack of ice or ice packs (i.e. no attempt to begin cooling process) or insufficient ice may not meet certain regulatory requirements and may invalidate certain data.
If temp. out, has the cooling process begun (i.e. ice or packs present) and sample collection times <6hrs., but samples are not yet cool?				✓	Note: No cooling process required for metals (except Hg soil) analysis.
6. Volatiles:					
Aqueous: No bubble larger than a pea?	✓				
Soil/Sediment:					
Received in airtight container?				✓	
Received in methanol?				✓	
Methanol covering soil?				✓	
D.I. Water - Received within 48 hour HT?				✓	
Air: Refer to KAS COC for canister/flow controller requirements.	√ if air included				
7. Trip Blank present in cooler?	✓				
8. Proper sample containers and volume?	✓				
9. Samples within hold time upon receipt?	✓				
10. Aqueous samples properly preserved?					
Metals, COD, NH3, TKN, O/G, phenol, TPO4, N+N, TOC, DRO, TPH – pH <2				✓	
Sulfide - >9				✓	
Cyanide – pH >12				✓	

* Log-In Notes to Exceptions: document any problems with samples or discrepancies or pH adjustments.

SAMPLE DATA SUMMARY PACKAGE

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Limit of Quantitation (LOQ)(previously called Practical Quantitation Level (PQL)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL/LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Limit of Quantitation (LOQ)(previously called Practical Quantitation Limit (PQL)), but above the Method Detection Limit (MDL).

or

J Used for Pesticides, PCBs, Herbicides, Formaldehyde, Explosives and Method 504.1 analytes when there is a greater than 40% difference for detected concentrations between the two GC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

C Indicates that the flagged compound did not meet DoD criteria in the corresponding daily calibration verification (CV).

L Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike and/or Matrix Spike Duplicate prepared and/or analyzed concurrently with the native sample.

N Presumptive evidence of a compound based on a mass spectral library search.

A Indicates that a tentatively identified compound is a suspected aldol-condensation product.

P Used for Pesticide/Aroclor analyte when there is a greater than 25% difference for detected concentrations between the two GC columns. (for CLP methods only).

RT Upper Limit = + 0.50 minutes of internal standard RT
RT Lower Limit = - 0.50 minutes of internal standard RT

Column used to flag values outside QC limits with an asterisk.
* Values outside of QC limits.

Sample Data Section

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Limit of Quantitation (LOQ)(previously called Practical Quantitation Level (PQL)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL/LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Limit of Quantitation (LOQ)(previously called Practical Quantitation Limit (PQL)), but above the Method Detection Limit (MDL).

or

J Used for Pesticides, PCBs, Herbicides, Formaldehyde, Explosives and Method 504.1 analytes when there is a greater than 40% difference for detected concentrations between the two GC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

C Indicates that the flagged compound did not meet DoD criteria in the corresponding daily calibration verification (CV).

L Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike and/or Matrix Spike Duplicate prepared and/or analyzed concurrently with the native sample.

N Presumptive evidence of a compound based on a mass spectral library search.

A Indicates that a tentatively identified compound is a suspected aldol-condensation product.

P Used for Pesticide/Aroclor analyte when there is a greater than 25% difference for detected concentrations between the two GC columns. (for CLP methods only).

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

ANALYTICAL RESULTS

PERFORMED BY

GCAL, LLC
7979 Innovation Park Dr.
Baton Rouge, LA 70820

Report Date 02/10/2018

GCAL Report 218020203

Project ARNG OMS 28/ 60556081

Deliver To	***Additional Recipients***
Steve Holt AECOM 10 Patewood Drive, Bldg. VI Suite 500 Greenville, SC 29615 864-234-2260	NONE

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: AECOM **Report:** 218020203

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

MISCELLANEOUS

See subcontract laboratory report case narrative.

Sample Receipt

The following samples were received on February 02, 2018 and were logged in under Katahdin Analytical Services work order number SL0867 for a hardcopy due date of February 14, 2018.

KATAHDIN Sample No.	GCAL Sample Identification
SL0867-1	OMS-28-GW76-28
SL0867-2	OMS-28-GW76-28-A
SL0867-3	OMS-28-GW76-13
SL0867-4	OMS-28-GW76-13-C
SL0867-5	OMS-28-GW78-12
SL0867-6	OMS-28-GW76-20
SL0867-7	OMS-28-GW78-20
SL0867-8	OMS-28-GW81-28
SL0867-9	OMS-28-GW78-27
SL0867-10	OMS-28-GW80-11
SL0867-11	OMS-28-GW79-11
SL0867-12	OMS-28-GW79-17
SL0867-13	OMS-28-GW79-27
SL0867-14	OMS-28-GW77-12
SL0867-15	OMS-28-GW77-12-A
SL0867-16	OMS-28-GW77-20

The samples were logged in for the analyses specified on the chain of custody form. All problems encountered and resolved during sample receipt have been documented on the applicable chain of custody forms.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in this narrative or in the Report of Analysis.

Sample analyses have been performed by the methods as noted herein.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact your Katahdin Analytical Services Project Manager, **Ms. Heather Manz**. This narrative is an integral part of the Report of Analysis.

Organics Analysis

The samples of Work Order SL0867 were analyzed in accordance with "Test Methods for Evaluating Solid Wastes: Physical/Chemical Methods." SW-846, 2nd edition, 1982 (revised 1984), 3rd edition, 1986, and Updates I, II, IIA, III, IIIA, and IIIB 1996, 1998 & 2004, Office of Solid Waste and Emergency Response, U.S. EPA, and/or for the specific methods listed below or on the Report of Analysis.

8260B SIM Analysis

There were no protocol deviations or observations noted by the organics laboratory staff for this analysis.

There were no other protocol deviations or observations noted by the organics laboratory staff.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Quality Assurance Officer, or their designee, as verified by the following signature.

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

Kelso Analytical Services, LLC.

Sample Receipt Condition Report

Client: GCAL	KAS PM:	Sampled By: Client	
Project:	KMS Entry By:	Delivered By: Fedex	
KAS Work Order#: SL0867	KMS Review By: AMH	Received By: JOB	
SDG #:	Cooler: 1 of 1	Date/Time Rec.: 2-2-18 855	

Receipt Criteria	Y	N	EX*	NA	Comments and/or Resolution
1. Custody seals present / intact?	✓				
2. Chain of Custody present in cooler?	✓				
3. Chain of Custody signed by client?	✓				
4. Chain of Custody matches samples?	✓				
5. Temperature Blanks present? If not, take temperature of any sample w/ IR gun.	✓				Temp (°C): 0.4
Samples received at <6 °C w/o freezing?	✓				Note: Not required for metals (except Hg soil) analysis.
Ice packs or ice present?	✓				
If yes, was there sufficient ice to meet temperature requirements?	✓				The lack of ice or ice packs (i.e. no attempt to begin cooling process) or insufficient ice may not meet certain regulatory requirements and may invalidate certain data.
If temp. out, has the cooling process begun (i.e. ice or packs present) and sample collection times <6hrs., but samples are not yet cool?				✓	Note: No cooling process required for metals (except Hg soil) analysis.
6. Volatiles:					
Aqueous: No bubble larger than a pea?	✓				
Soil/Sediment:					
Received in airtight container?				✓	
Received in methanol?				✓	
Methanol covering soil?				✓	
D.I. Water - Received within 48 hour HT?				✓	
Air: Refer to KAS COC for canister/flow controller requirements.	√ if air included				
7. Trip Blank present in cooler?	✓				
8. Proper sample containers and volume?	✓				
9. Samples within hold time upon receipt?	✓				
10. Aqueous samples properly preserved? Metals, COD, NH3, TKN, O/G, phenol, TPO4, N+N, TOC, DRO, TPH – pH <2 Sulfide - >9				✓	
Cyanide – pH >12				✓	

* Log-In Notes to Exceptions: document any problems with samples or discrepancies or pH adjustments.

SAMPLE DATA SUMMARY PACKAGE

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Limit of Quantitation (LOQ)(previously called Practical Quantitation Level (PQL)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL/LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Limit of Quantitation (LOQ)(previously called Practical Quantitation Limit (PQL)), but above the Method Detection Limit (MDL).

or

J Used for Pesticides, PCBs, Herbicides, Formaldehyde, Explosives and Method 504.1 analytes when there is a greater than 40% difference for detected concentrations between the two GC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

C Indicates that the flagged compound did not meet DoD criteria in the corresponding daily calibration verification (CV).

L Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike and/or Matrix Spike Duplicate prepared and/or analyzed concurrently with the native sample.

N Presumptive evidence of a compound based on a mass spectral library search.

A Indicates that a tentatively identified compound is a suspected aldol-condensation product.

P Used for Pesticide/Aroclor analyte when there is a greater than 25% difference for detected concentrations between the two GC columns. (for CLP methods only).

Form 5
Volatile Organic Instrument Performance Check

Lab Name : Katahdin Analytical Services
Project : ARNG OMS 28 - Mobile, AL
Lab File ID : DB095.D
Instrument ID : GCMS-D

SDG : SL0867
Date Analyzed : 06-FEB-18
Time Analyzed : 08:42
Heated Purge : No

m/e	Ion Abundance Criteria	% Relative Abundance		
50	15.0 - 40.0% of mass 95	15.4		
75	30.0 - 60.0% of mass 95	44.7		
95	Base Peak, 100% relative abundance	100		
96	5.0 - 9.0% of mass 95	7.8		
173	Less than 2.0% of mass 174	0.0	0.0	1
174	Greater than 50.0% of mass 95	83.0		
175	5.0 - 9.0% of mass 174	6.7	8.03	1
176	95.0 - 101.0% of mass 174	80.4	96.82	1
177	5.0 - 9.0% of mass 176	5.3	6.64	2

1-Value is % mass 174 2-Value is % mass 176

This check applies to the following samples, LCS, MS, MSD and standards:

Client Sample ID	Lab Sample ID	Lab File ID	Date Analyzed	Time Analyzed

Area Upper Limit = +100% of internal standard area
Area Lower Limit = - 50% of internal standard area
RT Upper Limit = + 0.50 minutes of internal standard RT
RT Lower Limit = - 0.50 minutes of internal standard RT

Column used to flag values outside QC limits with an asterisk.
* Values outside of QC limits.

Sample Data Section

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Limit of Quantitation (LOQ)(previously called Practical Quantitation Level (PQL)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL/LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Limit of Quantitation (LOQ)(previously called Practical Quantitation Limit (PQL)), but above the Method Detection Limit (MDL).

or

J Used for Pesticides, PCBs, Herbicides, Formaldehyde, Explosives and Method 504.1 analytes when there is a greater than 40% difference for detected concentrations between the two GC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

C Indicates that the flagged compound did not meet DoD criteria in the corresponding daily calibration verification (CV).

L Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike and/or Matrix Spike Duplicate prepared and/or analyzed concurrently with the native sample.

N Presumptive evidence of a compound based on a mass spectral library search.

A Indicates that a tentatively identified compound is a suspected aldol-condensation product.

P Used for Pesticide/Aroclor analyte when there is a greater than 25% difference for detected concentrations between the two GC columns. (for CLP methods only).

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

Deliver To	***Additional Recipients***
Steve Holt AECOM 10 Patewood Drive, Bldg. VI Suite 500 Greenville, SC 29615 864-234-2260	NONE

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Authorized Signature

Case Narrative

Client: AECOM **Report:** 218020242

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

MISCELLANEOUS

This report was completed in accordance with DOD QSM 5.0 as specified in the contract.

FIT = %RSD For Average Curve And Calibration Coefficent For Linear And Quadratic

$\overline{RF}$ = Mean Response Factor For Average Curve

Curve Types: A - Averged, L - Linear Regression, W - Weighted Linear, Q - Quadratic

m,b = Slope and Intercept For Linear Curve

For curve types L and Q, the RRF and RSP (Response) are shown on separate lines to allow for evaluation against minimum RRF

A,B,C = Coefficents For Quadratic Curve

Deliver To	***Additional Recipients***
Steve Holt AECOM 10 Patewood Drive, Bldg. VI Suite 500 Greenville, SC 29615 864-234-2260	NONE

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: AECOM **Report:** 218020614

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

MISCELLANEOUS

See subcontract laboratory report case narrative.

This report was completed in accordance with DOD QSM 5.0 as specified in the contract.

Q Flag Summary

SL0952-24	OMS-28-GW90-33
SL0952-25	OMS-28-GW83-31

The samples were logged in for the analyses specified on the chain of custody form. All problems encountered and resolved during sample receipt have been documented on the applicable chain of custody forms.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in this narrative or in the Report of Analysis.

Sample analyses have been performed by the methods as noted herein.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact your Katahdin Analytical Services Project Manager, **Ms. Heather Manz**. This narrative is an integral part of the Report of Analysis.

Organics Analysis

The samples of Work Order SL0952 were analyzed in accordance with "Test Methods for Evaluating Solid Wastes: Physical/Chemical Methods." SW-846, 2nd edition, 1982 (revised 1984), 3rd edition, 1986, and Updates I, II, IIA, III, IIIA, and IIIB 1996, 1998 & 2004, Office of Solid Waste and Emergency Response, U.S. EPA, and/or for the specific methods listed below or on the Report of Analysis.

Samples SL0952-3 and 23 were used for the matrix spike (MS) and matrix spike duplicate (MSD), as per client request.

8260B SIM Analysis

There were no protocol deviations or observations noted by the organics laboratory staff for this analysis.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Quality Assurance Officer, or their designee, as verified by the following signature.

Leslie Dimond

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

Katahdin Analytical Services, LLC.

Sample Receipt Condition Report

Client: GCAL	KAS PM:	Sampled By: Client	
Project:	KMS Entry By:	Delivered By: Fedex	
KAS Work Order#: SL0457	KMS Review By: AMH	Received By: JAB	
SDG #:	Cooler: 1 of 1	Date/Time Rec.: 2-6-18 915	

Receipt Criteria	Y	N	EX*	NA	Comments and/or Resolution
1. Custody seals present / intact?	✓				
2. Chain of Custody present in cooler?	✓				
3. Chain of Custody signed by client?	✓				
4. Chain of Custody matches samples?	✓				
5. Temperature Blanks present? If not, take temperature of any sample w/ IR gun.	✓				Temp (°C): -1.4
Samples received at <6 °C w/o freezing?	✓				Note: Not required for metals (except Hg soil) analysis.
Ice packs or ice present?	✓				
If yes, was there sufficient ice to meet temperature requirements?	✓				The lack of ice or ice packs (i.e. no attempt to begin cooling process) or insufficient ice may not meet certain regulatory requirements and may invalidate certain data.
If temp. out, has the cooling process begun (i.e. ice or packs present) and sample collection times <6hrs., but samples are not yet cool?				✓	Note: No cooling process required for metals (except Hg soil) analysis.
6. Volatiles:					
Aqueous: No bubble larger than a pea?	✓				
Soil/Sediment:					
Received in airtight container?				✓	
Received in methanol?				✓	
Methanol covering soil?				✓	
D.I. Water - Received within 48 hour HT?				✓	
Air: Refer to KAS COC for canister/flow controller requirements.	√ if air included				
7. Trip Blank present in cooler?	✓				
8. Proper sample containers and volume?	✓				
9. Samples within hold time upon receipt?	✓				
10. Aqueous samples properly preserved? Metals, COD, NH3, TKN, O/G, phenol, TPO4, N+N, TOC, DRO, TPH – pH <2 Sulfide - >9				✓	
Cyanide – pH >12				✓	

* Log-In Notes to Exceptions: document any problems with samples or discrepancies or pH adjustments.

SAMPLE DATA SUMMARY PACKAGE

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Limit of Quantitation (LOQ)(previously called Practical Quantitation Level (PQL)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL/LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Limit of Quantitation (LOQ)(previously called Practical Quantitation Limit (PQL)), but above the Method Detection Limit (MDL).

or

J Used for Pesticides, PCBs, Herbicides, Formaldehyde, Explosives and Method 504.1 analytes when there is a greater than 40% difference for detected concentrations between the two GC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

C Indicates that the flagged compound did not meet DoD criteria in the corresponding daily calibration verification (CV).

L Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike and/or Matrix Spike Duplicate prepared and/or analyzed concurrently with the native sample.

N Presumptive evidence of a compound based on a mass spectral library search.

A Indicates that a tentatively identified compound is a suspected aldol-condensation product.

P Used for Pesticide/Aroclor analyte when there is a greater than 25% difference for detected concentrations between the two GC columns. (for CLP methods only).

METALS SAMPLE FLAGGING

FLAG	SPECIFIED MEANING
E	The reported value is estimated because of the presence of interference (as indicated by serial dilution).
N	The pre-digestion spiked sample recovery is not within control limits.
*	The duplicate sample analysis relative percent difference (RPD) is not within control limits.
B	Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.
A	The post-digestion spiked sample recovery is not within control limits.
•	Analytical run QC sample (e.g. ICV, CCV, ICB, CCB, ICSA, ICSAB) not within control limits.
U	The analyte was not detected above the specified level. This level may be the Limit of Quantitation (LOQ) (previously called Practical Quantitation Level (PQL)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client. Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL/LOQ or "U" LOD, where the rate of false negatives is <1%.
J	The analyte was detected in the sample at a concentration less than the laboratory Limit of Quantitation (LOQ) (previously called Practical Quantitation Limit (PQL)), but above the Method Detection Limit (MDL).
Q	One or more quality control criteria failed (e.g., LCS recovery, surrogate spike recovery or CCV).

KATAHDIN ANALYTICAL SERVICES – INORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL "U" LOQ or "U" LOD, where the rate of false negatives is <1%.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Practical Quantitation Level (PQL) (also called Limit of Quantitation (LOQ)), but above the Method Detection Limit (MDL).

I-7 The laboratory's Practical Quantitation Level (PQL) or LOQ could not be achieved for this parameter due to sample composition, matrix effects, sample volume, or quantity used for analysis.

A-4 Please refer to cover letter or narrative for further information.

H_ Please note that the regulatory holding time for _____ is "analyze immediately". Ideally, this analysis must be performed in the field at the time of sample collection. _____ for this sample was not performed at the time of sample collection. The analysis was performed as soon as possible after receipt by the laboratory.

H1 - pH H2 - DO H3 - sulfite H4 - residual chlorine

T1 The client did not provide the full volume of at least one liter for analysis of TSS. Therefore, the PQL of 2.5 mg/L could not be achieved.

T2 The client provided the required volume of at least one liter for analysis of TSS, but the laboratory could not filter the full one liter volume due to the sample matrix. Therefore, the PQL of 2.5 mg/L could not be achieved.

M1 The matrix spike and/or matrix spike duplicate recovery performed on this sample was outside of the laboratory acceptance criteria. Sample matrix is suspected. The laboratory criteria was met for the Laboratory Control Sample (LCS) analyzed concurrently with this sample.

M2 The matrix spike and/or matrix spike duplicate recovery was outside of the laboratory acceptance criteria. The native sample concentration is greater than four times the spike added concentration so the spike added could not be distinguished from the native sample concentration.

R1 The relative percent difference (RPD) between the duplicate analyses performed on this sample was outside of the laboratory acceptance criteria (when both values are greater than ten times the PQL).

MCL	Maximum Contaminant Level	NL	No limit
NFL	No Free Liquid Present	FLP	Free Liquid Present
NOD	No Odor Detected	TON	Threshold Odor Number

D-1 As required by Method 5210B, APHA Standard Methods for the Examination of Water and Wastewater (21st edition), the BOD value reported for this sample is 'qualified' because the check standard run concurrently with the sample analysis did not meet the criteria specified in the method (198 +/- 30.5 mg/L). These results may not be reportable for compliance purposes.

D-2 The measured final dissolved oxygen concentrations of all dilutions were less than the method-specified limit of 1 mg/L. The reported BOD result was calculated assuming a final oxygen concentration equal to 1 mg/L. The reported value should be considered a minimum value.

D-3 The dilution water used to prepare this sample did not meet the method and/or regulatory criteria of less than 0.2 or 0.4 mg/L dissolved oxygen (DO) uptake over the five day period of incubation. These results may not be reportable for compliance purposes.

Sample Data Section

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Limit of Quantitation (LOQ)(previously called Practical Quantitation Level (PQL)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL/LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Limit of Quantitation (LOQ)(previously called Practical Quantitation Limit (PQL)), but above the Method Detection Limit (MDL).

or

J Used for Pesticides, PCBs, Herbicides, Formaldehyde, Explosives and Method 504.1 analytes when there is a greater than 40% difference for detected concentrations between the two GC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

C Indicates that the flagged compound did not meet DoD criteria in the corresponding daily calibration verification (CV).

L Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike and/or Matrix Spike Duplicate prepared and/or analyzed concurrently with the native sample.

N Presumptive evidence of a compound based on a mass spectral library search.

A Indicates that a tentatively identified compound is a suspected aldol-condensation product.

P Used for Pesticide/Aroclor analyte when there is a greater than 25% difference for detected concentrations between the two GC columns. (for CLP methods only).

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

Report Date 02/19/2018

GCAL Report 218020615

Project ARNG OMS 28/ 60556081

Deliver To	***Additional Recipients***
Steve Holt AECOM 10 Patewood Drive, Bldg. VI Suite 500 Greenville, SC 29615 864-234-2260	NONE

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: AECOM **Report:** 218020615

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

VOLATILES MASS SPECTROMETRY

In the EPA 8260B analysis, sample 21802061509 (OMS-28-GW85-19) had to be diluted to bracket the concentration of target analytes within the calibration range of the instrument. The dilution is reflected in elevated detection limits.

MISCELLANEOUS

This report was completed in accordance with DOD QSM 5.0 as specified in the contract.

Project ARNG OMS 28/ 60556081

Deliver To	***Additional Recipients***
Steve Holt AECOM 10 Patewood Drive, Bldg. VI Suite 500 Greenville, SC 29615 864-234-2260	NONE

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: AECOM **Report:** 218020702

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

MISCELLANEOUS

See subcontract laboratory report case narrative.

Sample Receipt

The following samples were received on February 07, 2018 and were logged in under Katahdin Analytical Services work order number SL0996 for a hardcopy due date of February 19, 2018.

KATAHDIN Sample No.	GCAL Sample Identification
SL0996-1	OMS-28-GW91-33
SL0996-2	OMS-28-GW91-33-C
SL0996-3	OMS-28-GW93-12
SL0996-4	OMS-28-GW93-16
SL0996-5	OMS-28-GW93-33
SL0996-6	OMS-28-GW92-12
SL0996-7	OMS-28-GW92-16
SL0996-8	OMS-28-GW92-33
SL0996-9	OMS-28-GW92-33-A

The samples were logged in for the analyses specified on the chain of custody form. All problems encountered and resolved during sample receipt have been documented on the applicable chain of custody forms.

We certify that the test results provided in this report meet all the requirements of the NELAC standards unless otherwise noted in this narrative or in the Report of Analysis.

Sample analyses have been performed by the methods as noted herein.

Should you have any questions or comments concerning this Report of Analysis, please do not hesitate to contact your Katahdin Analytical Services Project Manager, **Ms. Heather Manz**. This narrative is an integral part of the Report of Analysis.

Organics Analysis

The samples of Work Order SL0996 were analyzed in accordance with "Test Methods for Evaluating Solid Wastes: Physical/Chemical Methods." SW-846, 2nd edition, 1982 (revised 1984), 3rd edition, 1986, and Updates I, II, IIA, III, IIIA, and IIIB 1996, 1998 & 2004, Office of Solid Waste and Emergency Response, U.S. EPA, and/or for the specific methods listed below or on the Report of Analysis.

8260B SIM Analysis

There were no protocol deviations or observations noted by the organics laboratory staff for this analysis.

There were no other protocol deviations or observations noted by the organics laboratory staff.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Quality Assurance Officer, or their designee, as verified by the following signature.

Leslie Dimond

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

Katahdin Analytical Services, LLC.

Sample Receipt Condition Report

Client: GCAL	KAS PM: HM	Sampled By: Client	
Project:	KMS Entry By: JCB	Delivered By: Fedex	
KAS Work Order#: SL0996	KMS Review By: HM	Received By: JCB	
SDG #:	Cooler: _____ of _____	Date/Time Rec.: 2-7-18 1100	

Receipt Criteria	Y	N	EX*	NA	Comments and/or Resolution
1. Custody seals present / intact?	✓				
2. Chain of Custody present in cooler?	✓				
3. Chain of Custody signed by client?	✓				
4. Chain of Custody matches samples?	✓				
5. Temperature Blanks present? If not, take temperature of any sample w/ IR gun.	✓				Temp (°C): 0.2
Samples received at <6 °C w/o freezing?	✓				Note: Not required for metals (except Hg soil) analysis.
Ice packs or ice present?	✓				The lack of ice or ice packs (i.e. no attempt to begin cooling process) or insufficient ice may not meet certain regulatory requirements and may invalidate certain data.
If yes, was there sufficient ice to meet temperature requirements?	✓				
If temp. out, has the cooling process begun (i.e. ice or packs present) and sample collection times <6hrs., but samples are not yet cool?				✓	Note: No cooling process required for metals (except Hg soil) analysis.
6. Volatiles:					
Aqueous: No bubble larger than a pea?	✓				
Soil/Sediment:					
Received in airtight container?				✓	
Received in methanol?				✓	
Methanol covering soil?				✓	
D.I. Water - Received within 48 hour HT?				✓	
Air: Refer to KAS COC for canister/flow controller requirements.	√ if air included				
7. Trip Blank present in cooler?	✓				
8. Proper sample containers and volume?	✓				
9. Samples within hold time upon receipt?	✓				
10. Aqueous samples properly preserved?					
Metals, COD, NH3, TKN, O/G, phenol, TPO4, N+N, TOC, DRO, TPH – pH <2				✓	
Sulfide - >9				✓	
Cyanide – pH >12				✓	

* Log-In Notes to Exceptions: document any problems with samples or discrepancies or pH adjustments.

SAMPLE DATA SUMMARY PACKAGE

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Limit of Quantitation (LOQ)(previously called Practical Quantitation Level (PQL)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL/LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Limit of Quantitation (LOQ)(previously called Practical Quantitation Limit (PQL)), but above the Method Detection Limit (MDL).

or

J Used for Pesticides, PCBs, Herbicides, Formaldehyde, Explosives and Method 504.1 analytes when there is a greater than 40% difference for detected concentrations between the two GC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

C Indicates that the flagged compound did not meet DoD criteria in the corresponding daily calibration verification (CV).

L Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike and/or Matrix Spike Duplicate prepared and/or analyzed concurrently with the native sample.

N Presumptive evidence of a compound based on a mass spectral library search.

A Indicates that a tentatively identified compound is a suspected aldol-condensation product.

P Used for Pesticide/Aroclor analyte when there is a greater than 25% difference for detected concentrations between the two GC columns. (for CLP methods only).

Sample Data Section

KATAHDIN ANALYTICAL SERVICES - ORGANIC DATA QUALIFIERS

The sampled date indicated on the attached Report(s) of Analysis (ROA) is the date for which a grab sample was collected or the date for which a composite sample was completed. Beginning and start times for composite samples can be found on the Chain-of-Custody.

U Indicates the compound was analyzed for but not detected above the specified level. This level may be the Limit of Quantitation (LOQ)(previously called Practical Quantitation Level (PQL)), the Limit of Detection (LOD) or Method Detection Limit (MDL) as required by the client.

Note: All results reported as "U" MDL have a 50% rate for false negatives compared to those results reported as "U" PQL/LOQ or "U" LOD, where the rate of false negatives is <1%.

* Compound recovery or percent RPD (relative percent difference) was outside of quality control limits.

D Indicates the result was obtained from analysis of a diluted sample. Surrogate recoveries may not be calculable.

E Estimated value. This flag identifies compounds whose concentrations exceed the upper level of the calibration range of the instrument for that specific analysis.

J Estimated value. The analyte was detected in the sample at a concentration less than the laboratory Limit of Quantitation (LOQ)(previously called Practical Quantitation Limit (PQL)), but above the Method Detection Limit (MDL).

or

J Used for Pesticides, PCBs, Herbicides, Formaldehyde, Explosives and Method 504.1 analytes when there is a greater than 40% difference for detected concentrations between the two GC columns.

B Indicates the analyte was detected in the laboratory method blank analyzed concurrently with the sample.

C Indicates that the flagged compound did not meet DoD criteria in the corresponding daily calibration verification (CV).

L Indicates that the flagged compound did not meet DoD criteria in the corresponding Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) prepared and/or analyzed concurrently with the sample.

M Indicates that the flagged compound did not meet DoD criteria in the Matrix Spike and/or Matrix Spike Duplicate prepared and/or analyzed concurrently with the native sample.

N Presumptive evidence of a compound based on a mass spectral library search.

A Indicates that a tentatively identified compound is a suspected aldol-condensation product.

P Used for Pesticide/Aroclor analyte when there is a greater than 25% difference for detected concentrations between the two GC columns. (for CLP methods only).

Katahdin Analytical Services, Inc.

Manual Integration Codes For GC/MS, GC, HPLC and/or IC

M1	Peak splitting.
M2	Well defined peaks on the shoulders of the other peaks.
M3	There is additional area due to a coeluting interferant.
M4	There are negative spikes in the baseline.
M5	There are rising or falling baselines.
M6	The software has failed to detect a peak or misidentified a peak.
M7	Excessive peak tailing.
M8	Analysis such as GRO, DRO and TPH require a baseline hold.
M9	Peak was not completely integrated as in GC/MS.
M10	Primary ion was correctly integrated, but secondary or tertiary ion needed manual integration as in GC/MS.
M11	For GC analysis, when a sample is diluted by 1:10 or more, the surrogate is set to undetected and then the area under the surrogate is manually integrated.
M12	Manual integration saved in method due to TurboChrom floating point error.

GCAL Report 218020725

Project ARNG OMS 28/ 60556081

Deliver To	***Additional Recipients***
Steve Holt AECOM 10 Patewood Drive, Bldg. VI Suite 500 Greenville, SC 29615 864-234-2260	NONE

Laboratory Endorsement

Sample analysis was performed in accordance with approved methodologies provided by the Environmental Protection Agency or other recognized agencies. The samples and their corresponding extracts will be maintained for a period of 30 days unless otherwise arranged. Following this retention period the samples will be disposed in accordance with GCAL's Standard Operating Procedures.

Common Abbreviations that may be Utilized in this Report

ND	Indicates the result was Not Detected at the specified reporting limit
NO	Indicates the sample did not ignite when preliminary test performed for EPA Method 1030
DO	Indicates the result was Diluted Out
MI	Indicates the result was subject to Matrix Interference
TNTC	Indicates the result was Too Numerous To Count
SUBC	Indicates the analysis was Sub-Contracted
FLD	Indicates the analysis was performed in the Field
DL	Detection Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
RE	Re-analysis
CF	HPLC or GC Confirmation
00:01	Reported as a time equivalent to 12:00 AM

Reporting Flags that may be Utilized in this Report

J or I	Indicates the result is between the MDL and LOQ
J	DOD flag on analyte in the parent sample for MS/MSD outside acceptance criteria
U	Indicates the compound was analyzed for but not detected
B or V	Indicates the analyte was detected in the associated Method Blank
Q	Indicates a non-compliant QC Result (See Q Flag Application Report)
*	Indicates a non-compliant or not applicable QC recovery or RPD – see narrative
E	Organics - The result is estimated because it exceeded the instrument calibration range
E	Metals - % diference for the serial dilution is > 10%
L	Reporting Limits adjusted to meet risk-based limit.
P	RPD between primary and confirmation result is greater than 40
DL	Diluted analysis – when appended to Client Sample ID

Sample receipt at GCAL is documented through the attached chain of custody. In accordance with NELAC, this report shall be reproduced only in full and with the written permission of GCAL. The results contained within this report relate only to the samples reported. The documented results are presented within this report.

This report pertains only to the samples listed in the Report Sample Summary and should be retained as a permanent record thereof. The results contained within this report are intended for the use of the client. Any unauthorized use of the information contained in this report is prohibited.

I certify that this data package is in compliance with The NELAC Institute (TNI) Standard 2009 and terms and conditions of the contract and Statement of Work both technically and for completeness, for other than the conditions in the case narrative. Release of the data contained in this hardcopy data package and in the computer readable data submitted has been authorized by the Quality Assurance Manager or his/her designee, as verified by the following signature.

Estimated uncertainty of measurement is available upon request. This report is in compliance with the DOD QSM as specified in the contract if applicable.

Case Narrative

Client: AECOM **Report:** 218020725

Gulf Coast Analytical Laboratories received and analyzed the sample(s) listed on the Report Sample Summary page of this report. Receipt of the sample(s) is documented by the attached chain of custody. This applies only to the sample(s) listed in this report. No sample integrity or quality control exceptions were identified unless noted below.

MISCELLANEOUS

This report was completed in accordance with DOD QSM 5.0 as specified in the contract.

FIT = %RSD For Average Curve And Calibration Coefficent For Linear And Quadratic

Curve Types: A - Averged, L - Linear Regression, W - Weighted Linear, Q - Quadratic

For curve types L and Q, the RRF and RSP (Response) are shown on separate lines to allow for evaluation against minimum RRF

$\overline{RF}$ = Mean Response Factor For Average Curve

m,b = Slope and Intercept For Linear Curve

A,B,C = Coefficents For Quadratic Curve

Organic
Limited Data Validation Report

Alabama Army National Guard
Organizational Maintenance Shop #28
Mobile, Alabama
Water and QC Samples
GCAL Analytical Laboratories, LLC
January 2016

Prepared By Anne Kakai
Validation Chemist/Database Coordinator

Overview

The samples analyzed for the January sampling events (limited validation) are listed in the Table of Samples Analyzed (Table 1, page 3). Limited data validation was performed on a total of 11 water samples, one field duplicate sample and 2 associated trip blank samples.

Samples were analyzed by GCAL Analytical Laboratories, LA. The reviewed analyses were Volatile Organic Compounds (VOCs) by SW-846 Method 8260B.

The Analytical Data Validation Checklist is presented as pages 10-38. Laboratory data were reviewed in accordance with directives set forth in the Alabama Army National Guard Organizational Maintenance Shop #28, Uniform Federal Policy – Quality Assurance Project Plan (UFP QAPP), authored by AECOM Technical Services, January 2016. Data were also evaluated based on validation criteria set forth in the *USEPA CLP National Functional Guidelines for Superfund Organic Methods Data Review*, document number USEPA-540-R-08-01, June 2008, as they applied to the reported methodology. Field duplicate RPD evaluation processes were taken from the USEPA Region I Laboratory Data Validation Functional Guidelines for Evaluating Organics Analyses, December 1996.

The following data components were reviewed during the limited data validation procedure:

Reviewed Deliverables/Data
Chain-of-Custody form(s) and sample integrity
Case Narratives (including any laboratory flags)
Sample results, reporting detection limits, dilution factors
Holding times
Laboratory blank results
Trip blank results
Organic surrogate recoveries
LCS, LCSD (blank spike, blank spike duplicate) results
MS, MSD (matrix spike, matrix spike duplicate) results
Laboratory duplicate (or spiked duplicate) results
Electronic data deliverables (EDDs)

Data Validation Qualifiers Assigned During this Review

J estimated concentration

Assigned qualifiers are detailed in the Analytical Data Validation Checklist and are summarized in the Table of Qualified Analytical Results (page 10).

Overall Data Assessment

Field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness have been determined to be acceptable, based on the data submitted. No data were missing or rejected. All reported data are suitable for their intended use with the qualifications and clarifications noted.

PRECISION, ACCURACY, METHOD COMPLIANCE, AND COMPLETENESS ASSESSMENT

Precision:	**X**	Acceptable		Unacceptable	AK	Initials
Comments: Precision is the measure of variability of individual sample measurements. Field precision is determined by comparison of field duplicate sample results. Laboratory precision was determined by examination of laboratory duplicate results. Evaluation of duplicates for precision was done using the Relative Percent Difference (RPD). The RPD is defined as the difference between two duplicate samples divided by the mean and expressed as a percent. RPD limits referenced EPA published QC limits. Data that required qualification based on laboratory and calculated field duplicate RPDs, is discussed as part of items 17 and 21 respectively. Overall field and laboratory precision is acceptable since no data is qualified or rejected based on these measurements.						
Accuracy:	**X**	Acceptable		Unacceptable	AK	Initials
Comments: Field accuracy, a measure of the sampling bias, is generally determined by reviewing trip blank results for evidence of sample contamination stemming from sampling activities and/or sample transport/bottle contamination in applicable methods. Laboratory accuracy is a measure of the system bias, and is measured by evaluating laboratory control sample/laboratory control sample duplicate (LCS/LCSD), and organic system monitoring compounds (surrogate and internal standard) percent recoveries (%Rs). LCS/LCSD %Rs, which demonstrated the overall performance of the analytical procedure, were compared to QAPP limits. MS/MSD %Rs, which provide information on sample matrix interferences, would be compared to QAPP limits, EPA published QC limits or laboratory control charted limits to evaluate matrix effects upon sample analysis. System monitoring compound or surrogate recoveries, which measured system performance and efficiency during organic analysis, were compared to QAPP limits. Overall field and laboratory accuracy is acceptable since no data is qualified or rejected based on these measurements. Accuracy measurements are reviewed in items 12, 14, 15, and 16.						
Method Compliance:	**X**	Acceptable		Unacceptable	AK	Initials
Comments: For this sample set, method compliance was determined by evaluating sample integrity and holding time against method specified requirements, while applying QAPP validation guidelines. Although some data require qualification based on estimated quantitation (see item 6), overall method compliance is acceptable based on the data reported since a majority of the data are unqualified and no data are rejected. Method compliance measurements are reviewed in items 4, 6, 8, 11, 13, 18, 19, 20 and 22 below.						
Completeness:	**X**	Acceptable		Unacceptable	AK	Initials

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

Comments: Completeness is the overall ratio of the number of samples planned versus the number of samples with valid analyses. Review completeness goals were set at 90-100%. Determination of completeness included a review of chain of custody records, laboratory analytical methods, and reporting limits. Completeness also included 100% review of the laboratory sample data results, QC summary reports, and EQuIS electronic data deliverables (EDDs). Any EDD modifications were made as documented in item 23.

All of the reported data are usable, some with qualification. Since no data are missing or rejected, completeness of the dataset is calculated to be 100% and is acceptable.

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

VALIDATION CRITERIA CHECK						
Data validation qualifiers assigned during this review for reportable data: J estimated concentration The following comments identifying sample results requiring qualification are in bold type. The other comments are of interest, but qualification of the sample results is not necessary. **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 10).**						
1. Did the laboratory identify any non-conformances related to the analytical results?	**X**	Yes		No	AK	Initials
Explanation by laboratory: Comments: Sample OMS-28-5-012016 as concentrations exceeded the calibration range, (discussed under item #6). All laboratory case narrative comments are included in the hardcopy (or .pdf) laboratory report. All assigned laboratory flags were also reviewed during the limited validation procedure. Data qualification, if any, related to the narrative comments and/or assigned laboratory flags contained in the analytical reports are discussed in the following sections.						
2. Were sample Chain-of-Custody forms complete?	**X**	Yes		No	AK	Initials
Comments: COC records from field to laboratory were complete. Custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt.						
3. Were all the analyses requested for the samples on the COCs completed by the laboratory?	**X**	Yes		No	AK	Initials
Comments: All requested analyses as documented on original COC records were completed by the laboratory.						
4. Were samples received in good condition and at the appropriate temperature?	**X**	Yes		No	AK	Initials
Comments: Samples were received on ice, intact, and in good condition. Cooler temperatures were within the 2°C - 6°C acceptance range as noted in the Sample Condition Upon Receipt form and on the COC. Data qualification is not needed.						
5. Were the reported analytical methods in compliance with WP/QAPP, permit, or COC?	**X**	Yes		No	AK	Initials
Comments: The reported analytical methods are in compliance with COC requests and the QAPP. Compliance with permit is generally evaluated by the project manager.						
6. Were detection limits in accordance with WP/QAPP, permit, or method?	**X**	Yes		No	AK	Initials
Comments: Reporting limits (RLs) are achievable by the quoted methods. Sample OMS-28-5-012016 had to be diluted due to concentrations exceeding the calibration range. The reporting limits were raised appropriately. No data qualification is required. **Sample results reported at concentrations ≥ the method detection limit (MDL) but < the limit of quantitation (LOQ) require J qualifiers to indicate estimated concentrations. The analyte cannot be accurately quantitated at this trace concentration level**. **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 10).**						

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

7. Do the laboratory reports include only those constituents requested to be reported for a specific analytical method?	**X**	Yes		No	AK	Initials
Comments: The reported target analytes are in compliance with the constituents identified on the COC.						
8. Were sample holding times met?	**X**	Yes		No	AK	Initials
Comments: Sample preparation/extraction and analytical holding times were met for all samples and analyses.						
9. Were correct concentration units reported?	**X**	Yes		No	AK	Initials
Comments: All concentration units reported were correct.						
10. Were the reporting requirements for flagged data met?	**X**	Yes		No	AK	Initials
Comments: Data validation qualifiers override any assigned laboratory data flags.						
11. Were laboratory blank samples free of target analyte contamination?	**X**	Yes		No	AK	Initials
Comments: All laboratory blanks were free of target analyte contamination.						
12. Were trip blank, field blank, and/or equipment rinse blank samples free of target analyte contamination?	**X**	Yes		No	AK	Initials
Comments: Field blank and equipment rinse blank samples were not collected for the data evaluated in this DVR. The trip blank samples were free of target analyte contamination. Data qualification is not required.						
13. Were instrument calibrations within method or data validation control limits?	**NA**	Yes	**NA**	No	AK	Initials
Comments: For this level of limited data validation, instrument calibrations are generally not evaluated. The laboratory's project narrative was utilized to verify that instrument calibrations met acceptance criteria. The laboratory's narrative did not identify any outliers.						
14. Were surrogate recoveries within control limits?	**X**	Yes		No	AK	Initials
Comments: Surrogate %Rs for organic analyses were within laboratory control-charted QC limits (as allowed for SW-846 methods) for all project samples and associated laboratory QC samples. Based on this, data qualification was not required.						
15. Were laboratory control sample recoveries within control limits?	**X**	Yes		No	AK	Initials
Comments: Submitted LCS %Rs were within laboratory control-charted QC limits for organic target analytes as allowed for SW-846 organic methods. Data qualification is not required.						
16. Were matrix spike recoveries within control limits?	**X**	Yes		No	AK	Initials
Comments: MS/MSD %Rs from non-project samples were considered, but were not utilized to qualify project samples since matrix similarity to project samples could not be guaranteed. When analyzed, project specific MS/MSD %Rs for target analytes were within laboratory control charted QC limits. MS/MSD %Rs must both be outside of QC limits in order for results to be qualified based on matrix.						
17. Were duplicate RPDs and/or serial dilution %Ds within control limits?	**X**	Yes		No	AK	Initials

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

Comments: RPDs for target analytes in project-specific MS/MSD and laboratory duplicate samples were within laboratory control charted QC limits. *Serial Dilution %Ds: Not applicable for the methods evaluated in this SDG.*

18. Were organic system performance criteria met?	**NA**	Yes	**NA**	No	AK	Initials

Comments: For this level of limited data validation, organic system performance data were not supplied in analytical laboratory reports. The laboratory's project narrative was utilized to verify that organic system performance requirements were met. The laboratory's narrative did not identify any outliers; therefore, data qualification was not required.

19. Were internal standards within method criteria for GC/MS sample analyses?	**NA**	Yes	**NA**	No	AK	Initials

Comments: For this level of limited data validation, organic system performance data are generally not evaluated. The laboratory's project narrative was utilized to verify that organic system performance requirements were met.

20. Were inorganic system performance criteria met?	**NA**	Yes	**NA**	No	AK	Initials

Comments: Not applicable for the methods evaluated in this SDG.

21. Were blind field duplicates collected? If so, discuss the precision (RPD) of the results.	**X**	Yes		No	AK	Initials

SDG	Primary Sample ID	Duplicate Sample ID	Sample Date	Sample Time
216012515	OMS-28-3-012116	OMS-28-3-A-012116	1/21/2016	11:25

Comments: Field duplicate RPDs were within data validation QC limits of > 5XQL; ≤35% for water matrices, or RPDs were not applicable due to results that were within ± 2X the reporting limit or were undetected in both samples, except as noted in bold below. Field duplicate and native sample concentrations that were both undetected are not reflected below since RPDs are not applicable.

The following RPDs were calculated:

Method	Unit	Analyte	RPD	RL	OMS-28-3-012116	OMS-28-3-A-012116	Qualifier
SW8260B	UG/L	cis-1,2-Dichloroethene	0.6	0.5	1.59	1.60	None
SW8260B	UG/L	Trichloroethene	1.6	0.5	8.92	8.78	None

All RPDs were within QC acceptance criteria and based on this data qualification is not required.

22. Were qualitative criteria for organic target analyte identification met?	**NA**	Yes	**NA**	No	AK	Initials

Comments: For this level of limited data validation – Chromatograms, library searches, and quantitation reports are generally not evaluated. The laboratory's project narrative was utilized to verify that qualitative criteria for organic target analyte identification *were met.*

23. Were 100% of the EDD concentrations and reporting limits compared to the hardcopy data reports?	**X**	Yes		No	AK	Initials

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

Comments: The EDD entries were resolved with the hardcopy data results and corrected as necessary. According to validation protocol, the hardcopy data report was accepted as the correct reference. Qualifiers and reason codes were added to the EDD files for all reportable data. The four EQuIS EDD files were formatted for upload once data validation secondary review is completed.

Additional edits made to the EDD files by the Database Manager prior to data upload are listed below.

Unique sys_loc_codes were assigned to all samples. In order to upload multiple SDGs under one EDD, SDG numbers were appended to all laboratory QC data and dates were appended to trip blank samples in order to keep them unique. Parent sample designations were made for all LCS/LCSD and field duplicate samples. MS/MSD and laboratory duplicate samples already had pre-assigned parent sample designations which were verified using the hard copy laboratory report.

Updated the Analysis entries from “000” to “Initial”.

The result_comment field was updated from <PQL to <LOQ and the interpreted_qualifier field was updated accordingly.

A task_code field was assigned, “OMS28ARNG_GWJan2016”.

24. General Comments: Laboratory data were reviewed in accordance with directives set forth in the Alabama Army National Guard Organizational Maintenance Shop #28, Uniform Federal Policy – Quality Assurance Project Plan (UFP QAPP), authored by AECOM Technical Services, January 2016. Data were also evaluated based on validation criteria set forth in the *USEPA CLP National Functional Guidelines for Superfund Organic Methods Data Review*, document number USEPA-540-R-08-01, June 2008, as they applied to the reported methodology. Field duplicate RPD evaluation processes were taken from the USEPA Region I Laboratory Data Validation Functional Guidelines for Evaluating Organics Analyses, December 1996.

Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 10).

Organic
Limited Data Validation Report

Alabama Army National Guard
Organizational Maintenance Shop #28
Mobile, Alabama
May 2017
Water and Soil Samples
Analyzed by GCAL Analytical Laboratories, LLC

Prepared By Joseph Capotrio
Validation Chemist/Database Coordinator

Overview

The samples analyzed for the May 2017 sampling events (limited validation) are listed in the Table of Samples Analyzed (Table 1, pages 3-4). Limited data validation was performed on a total of 44 water samples, 9 soil samples, 3 field duplicate water samples, and 8 associated trip blank samples.

Samples were analyzed for Volatile Organic Compounds (VOCs) by SW-846 Method 8260B by GCAL Analytical Laboratories, LA (GCAL) and VOCs by EPA Method 8260C-SIM by ALS Environmental—Kelso WA, Laboratory (ALS).

The Analytical Data Validation Checklist is presented as pages 5-11. Laboratory data were reviewed in accordance with directives set forth in the Alabama Army National Guard Organizational Maintenance Shop #28, Uniform Federal Policy – Quality Assurance Project Plan (UFP QAPP), authored by AECOM Technical Services, January 2016. Data were also evaluated based on validation criteria set forth in the Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories Version 5.0 (DoD July 2013), and the *USEPA CLP National Functional Guidelines for Superfund Organic Methods Data Review*, document number USEPA-540-R-08-01, June 2014 as they applied to the reported methodology. Field duplicate RPD evaluation processes were taken from the *EPA New England Environmental Data Review Supplement For Regional Data Review Elements and Superfund Specific Guidance/Procedures April 22, 2013,* document number EQADR-Supplement.

The following data components were reviewed during the limited data validation procedure:

Reviewed Deliverables/Data
Case Narratives (including any assigned laboratory flags)
Chain-of-Custody (COC) form(s) and sample integrity
Sample results, reporting limits, dilution factors
Holding times
Method (preparation) blank results
Field blank results
Laboratory control sample (LCS), laboratory control sample duplicate (LCSD) results
Matrix spike (MS), matrix spike duplicate (MSD) results
Laboratory duplicate (or spiked duplicate) results
Field duplicate (FD) results (calculated Relative Percent Differences [RPD])
Electronic data deliverables (EDDs) – EQuIS format

Data Validation Qualifiers Assigned During this Review

J Results reported as a detect and qualified as an estimated concentration
U Results qualified as a non-detect

Assigned qualifiers are detailed in the Analytical Data Validation Checklist and are summarized in the Table of Qualified Analytical Results (page 12).

Overall Data Assessment

Field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness have been determined to be acceptable, based on the data submitted. No data were missing or rejected. All reported data are suitable for their intended use with the qualifications and clarifications noted.

Project Name: Alabama Army National Guard Organizational Maintenance Shop #28 Mobile, Alabama	Laboratory: GCAL Analytical Laboratories, LLC and ALS Environmental—Kelso, WA
Project Reference: Organizational Maintenance Shop #28 Mobile, Alabama	Sample Matrix: Water and Soil
AECOM Project: 60439687 task 2.3.	Sample Start Date: 05/01/2017
Validator/Date Validated: Joseph Capotrio/Steve Szocik 07/06/2017 (completed)	Sample End Date: 05/19/2017
Secondary Review by: Steve Szocik	Secondary Review Date: 7/17/2017
Samples Analyzed: see Table of Samples Analyzed, Alabama Army National Guard Organizational Maintenance Shop #28 Mobile, Alabama May 2017 (Table 1).	
Parameters Validated: VOCs by 8260B and 8260C-SIM	
Laboratory Project IDs/Sample Delivery Groups (SDGs): 217050803, 217051044 (K170459), 217051110, 217051316, 217052202, 217053111 (K1705066), 217053112 (K1704732), and 217053113 (K1704857)	

PRECISION, ACCURACY, METHOD COMPLIANCE, AND COMPLETENESS ASSESSMENT

Precision:	**X**	Acceptable		Unacceptable	*JC*	Initials
Comments: Precision is the measure of variability of individual sample measurements. Field precision is determined by comparison of field duplicate sample results. Laboratory precision was determined by examination of laboratory duplicate results. Evaluation of duplicates for precision was done using the Relative Percent Difference (RPD). The RPD is defined as the difference between two duplicate samples divided by the mean and expressed as a percent. RPD limits referenced EPA published QC limits. Data that required qualification based on laboratory and calculated field duplicate RPDs, is discussed as part of items 17 and 21 respectively. Data was not rejected based on these measurements and the overall field and laboratory precision is acceptable						
Accuracy:	**X**	Acceptable		Unacceptable	*JC*	Initials
Comments: Field accuracy, a measure of the sampling bias, is generally determined by reviewing trip blank results for evidence of sample contamination stemming from sampling activities and/or sample transport/bottle contamination in applicable methods. Laboratory accuracy is a measure of the system bias, and is measured by evaluating laboratory control sample/laboratory control sample duplicate (LCS/LCSD), and organic system monitoring compounds (surrogate and internal standard) percent recoveries (%Rs). LCS/LCSD %Rs, which demonstrated the overall performance of the analytical procedure, were compared to QAPP limits. MS/MSD %Rs, which provide information on sample matrix interferences, would be compared to QAPP limits, EPA published QC limits or laboratory control charted limits to evaluate matrix effects upon sample analysis. System monitoring compound or surrogate recoveries, which measured system performance and efficiency during organic analysis, were compared to QAPP limits. Accuracy measurements are reviewed in items 12, 14, 15, and 16. Data was not qualified or rejected based on these measurements and the overall field and laboratory accuracy is acceptable.						
Method Compliance:	**X**	Acceptable		Unacceptable	*JC*	Initials
Comments: For this sample set, method compliance was determined by evaluating sample integrity and holding time against method specified requirements, while applying QAPP validation guidelines. Although some data require qualification based on estimated quantitation (see item 6), overall method compliance is acceptable based on the data reported since a majority of the data are unqualified and no data are rejected. Method compliance measurements are reviewed in items 4, 6, 8, 11, 13, 18, 19, 20 and 22 below.						
Completeness: (Continued on next page)	**X**	Acceptable		Unacceptable	*JC*	Initials

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

Comments: Completeness is the overall ratio of the number of samples planned versus the number of samples with valid analyses. Review completeness goals were set at 90-100%. Determination of completeness included a review of chain of custody records, laboratory analytical methods, and reporting limits. Completeness also included 100% review of the laboratory sample data results, QC summary reports, and EQuIS electronic data deliverables (EDDs). Any EDD modifications were made as documented in item 23.

All of the reported data are usable, some with qualification. Since no data are missing or rejected, completeness of the dataset is calculated to be 100% and is acceptable.

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

VALIDATION CRITERIA CHECK						
Data validation qualifiers assigned during this review for reportable data: J estimated concentration U Results qualified as a non-detect The following comments identifying sample results requiring qualification are in bold type. The other comments are of interest, but qualification of the sample results is not necessary. **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 12).**						
1. Did the laboratory identify any non-conformances related to the analytical results?	**X**	Yes		No	*JC*	Initials
Explanation by laboratory: Comments: The following items were noted in laboratory case narrative comments included in the hardcopy (or .pdf) laboratory report: **SDG #217050803** - Samples OMS-28-GW32-12-S, OMS-28-5, and OMS-28-5-a exceeded the calibration range, (discussed under item #6). **SDG #217051044** - The toluene-d8 surrogate for the VOC analysis of samples OMS-28-GW32-12-S exceeded the upper control limits (discussed under item #14) **SDG #217051110** - Samples OMS-28-SB24-1-S, OMS-28-SB24-3-S, and OMS-28-SB24-5-S exceeded the calibration range, (discussed under item #6). **SDG #217052202** – The RPDs between the LCS and LCSD results were above the control limits for acetone, 1,1-dichloroethane, trans-1,2-dichloroethene, methylene chloride, tert-butyl methyl ether (MTBE) and methyl acetate, (discussed under item #17). Data qualification, if any, related to the narrative comments and/or assigned laboratory flags contained in the analytical reports are discussed in the following sections. All assigned laboratory flags were also reviewed during the limited validation procedure.						
2. Were sample Chain-of-Custody forms complete?	**X**	Yes		No	*JC*	Initials
Comments: COC records from field to laboratory were complete. Custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt.						
3. Were all the analyses requested for the samples on the COCs completed by the laboratory?	**X**	Yes		No	*JC*	Initials
Comments: All requested analyses as documented on original COC records were completed by the laboratory.						
4. Were samples received in good condition and at the appropriate temperature?	**X**	Yes		No	*JC*	Initials
Comments: Samples were received on ice, intact, and in good condition. Cooler temperatures were within the 2-4°C acceptance range as noted in the Sample Condition Upon Receipt form and on the COC. Data qualification is not needed.						

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

5. Were the reported analytical methods in compliance with WP/QAPP, permit, or COC?	**X**	Yes		No	*JC*	Initials
Comments: The reported analytical methods are in compliance with COC requests and the QAPP. Compliance with permit is generally evaluated by the project manager.						
6. Were detection limits in accordance with WP/QAPP, permit, or method?	**X**	Yes		No	*JC*	Initials
Comments: Detection limits (DLs) and limits of quantitation (LOQs) are achievable by the quoted methods. Samples OMS-28-GW32-12-S, OMS-28-5, OMS-28-5-a, OMS-28-SB24-1-S, OMS-28-SB24-3-S, and OMS-28-SB24-5-S had to be diluted due to concentrations exceeding the calibration range. The LOQs were raised appropriately. No data qualification is required. **Sample results reported at concentrations ≥ the DL but < the LOQ require J qualifiers to indicate estimated concentrations. The analyte cannot be accurately quantitated at this trace concentration level**. **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 12).**						
7. Do the laboratory reports include only those constituents requested to be reported for a specific analytical method?	**X**	Yes		No	*JC*	Initials
Comments: The reported target analytes are in compliance with the constituents identified on the COC.						
8. Were sample holding times met?	**X**	Yes		No	*JC*	Initials
Comments: Sample preparation/extraction and analytical holding times were met for all samples and analyses.						
9. Were correct concentration units reported?	**X**	Yes		No	*JC*	Initials
Comments: All concentration units reported were correct.						
10. Were the reporting requirements for flagged data met?	**X**	Yes		No	*JC*	Initials
Comments: Data validation qualifiers override any assigned laboratory data flags.						
11. Were laboratory blank samples free of target analyte contamination?		Yes	**X**	No	*JC*	Initials
Comments: With the exceptions listed below, laboratory blanks were free of target analyte contamination. Methylene chloride was detected in method blank 1684001-LB-217051110 (SDG # 217051110) at a concentration of 1.61 µg/L. Methylene chloride results reported as detected at concentration less than 10 times the blank contamination for samples associated with the method blank were qualified as non-detect. **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 12).**						
12. Were trip blank, field blank, and/or equipment rinse blank samples free of target analyte contamination?	**X**	Yes		No	*JC*	Initials
Comments: Field blank and equipment rinse blank samples were not collected for the data evaluated in this DVR. The trip blank samples were free of target analyte contamination. Data qualification is not required.						
13. Were instrument calibrations within method or data validation control limits?	**NA**	Yes	**NA**	No	*JC*	Initials
Comments: For this level of limited data validation, instrument calibrations are generally not evaluated. The laboratory's project narrative was utilized to verify that instrument calibrations met acceptance criteria. The laboratory's narrative did not identify any outliers.						

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

14. Were surrogate recoveries within control limits?		Yes	**X- no effect**	No	*JC*	Initials
Comments: With the exception listed below, surrogate %Rs for organic analyses were within laboratory control-charted QC limits (as allowed for SW-846 methods) for all project samples and associated laboratory QC samples. The toluene-d8 surrogate for sample OMS-28-GW32-12-S reported in data package 217051044 was outside the acceptance limits of 74-112% with a recovery of 117%. This surrogate is not associated with the analytes reported in this sample; therefore, data qualification was not required.						
15. Were laboratory control sample recoveries within control limits?	**X**	Yes		No	*JC*	Initials
Comments: Submitted LCS %Rs were within laboratory control-charted QC limits for organic target analytes as allowed for SW-846 organic methods. Data qualification is not required.						
16. Were matrix spike recoveries within control limits?	**X**	Yes		No	*JC*	Initials
Comments: MS/MSD %Rs from non-project samples were considered, but were not utilized to qualify project samples since matrix similarity to project samples could not be guaranteed. When analyzed, project specific MS/MSD %Rs for target analytes were within laboratory control charted QC limits.						
17. Were duplicate RPDs and/or serial dilution %Ds within control limits?		Yes	**X**	No	*JC*	Initials
Comments: With the exceptions listed below, the RPDs for target analytes in project-specific MS/MSD and laboratory duplicate samples were within the QAPP or QSM QC limits. For SDG # 217052202, the RPDs between the LCS and LCSD (batch 611089) results were above the control limits of ≤20% for acetone (31%), 1,1-dichloroethane (21%), trans-1,2-dichloroethene (28%), methylene chloride (27%), tert-butyl methyl ether (MTBE) (28%), and methyl acetate (37%). Any associated detected analytes were J qualified, and analytes not detected were not affected. **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 12).** *Serial Dilution %Ds: Not applicable for the methods evaluated in this SDG.*						
18. Were organic system performance criteria met?	**NA**	Yes	**NA**	No	*JC*	Initials
Comments: For this level of limited data validation, organic system performance data were not supplied in analytical laboratory reports. The laboratory's project narrative was utilized to verify that organic system performance requirements were met. The laboratory's narrative did not identify any outliers; therefore, data qualification was not required.						
19. Were internal standards within method criteria for GC/MS sample analyses?	**NA**	Yes	**NA**	No	*JC*	Initials
Comments: For this level of limited data validation, organic system performance data are generally not evaluated. The laboratory's project narrative was utilized to verify that organic system performance requirements were met.						
20. Were inorganic system performance criteria met?	**NA**	Yes	**NA**	No	*JC*	Initials
Comments: Not applicable for the methods evaluated in this SDG.						
21. Were blind field duplicates collected? If so, discuss the precision (RPD) of the results. (Continued on next page)	**X**	Yes		No	*JC*	Initials

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

SDG	Primary Sample ID	Duplicate Sample ID	Sample Date	Sample Time
217050803	OMS-28-5	OMS-28-5-A	5/05/2017	14:08
217051316	OMS-28-GW57-16-S	OMS-28-GW57-16-S-a	5/12/2017	11:45
217053112	OMS-28-GW57-16-S	OMS-28-GW57-16-S-a	5/12/2017	11:45

Comments: Field duplicate RPDs were within data validation QC limits of ≤35% for water matrices when the result is > 5X the LOQ, or RPDs were within ± 2X the LOQ or were undetected in both samples. Field duplicate and native sample concentrations that were both undetected are not reflected below since RPDs are not applicable.

The following RPDs were calculated:

Duplicate Pair	Method	Unit	Analyte	RPD	RL	Primary Result (µg/L)	Duplicate Result (µg/L)	Qualifier
SDG# 217050803								
OMS-28-5-A/ OMS-28-5	SW8260B	UG/L	cis-1,2-Dichloroethene	1.0	1.0	103	102	None
	SW8260B	UG/L	trans-1,2-Dichloroethene	6.7	1.0	31.6	33.8	None
	SW8260B	UG/L	Tetrachloroethene	6.0	1.0	154	145	None
	SW8260B	UG/L	Trichloroethene	0.4	1.0	246	247	None

All RPDs were within QC acceptance criteria and based on this data qualification is not required.

22. Were qualitative criteria for organic target analyte identification met?	**NA**	Yes	**NA**	No	*JC*	Initials

Comments: For this level of limited data validation – Chromatograms, library searches, and quantitation reports are generally not evaluated. The laboratory's project narrative was utilized to verify that qualitative criteria for organic target analyte identification *were met.*

23. Were 100% of the EDD concentrations and reporting limits compared to the hardcopy data reports?	**X**	Yes		No	*JC*	Initials

Comments: The EDD entries were resolved with the hardcopy data results and corrected as necessary. According to validation protocol, the hardcopy data report was accepted as the correct reference. Qualifiers and reason codes were added to the EDD files for all reportable data. The four EQuIS EDD files were formatted for upload once data validation secondary review is completed.

Additional edits made to the EDD files by the Database Manager prior to data upload are listed below.

Unique sys_loc_codes were assigned to all samples. In order to upload multiple SDGs under one EDD, SDG numbers were appended to all laboratory QC data and dates were appended to trip blank samples in order to keep them unique. Parent sample designations were made for all LCS/LCSD and field duplicate samples. MS/MSD and laboratory duplicate samples already had pre-assigned parent sample designations which were verified using the hard copy laboratory report.

Updated the Analysis entries from "000" to "Initial".

A task_code field was assigned, "OMS28_GW_SO_May2017".

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

24. General Comments: Laboratory data were reviewed in accordance with directives set forth in the Alabama Army National Guard Organizational Maintenance Shop #28, Uniform Federal Policy – Quality Assurance Project Plan (UFP QAPP), authored by AECOM Technical Services, January 2016. Data were also evaluated based on validation criteria set forth in the Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories Version 5.0 (DoD July 2013), and *USEPA CLP National Functional Guidelines for Superfund Organic Methods Data Review*, document number USEPA-540-R-08-01, June 2008, as they applied to the reported methodology. Field duplicate RPD evaluation processes were taken from the *EPA New England Environmental Data Review Supplement For Regional Data Review Elements and Superfund Specific Guidance/Procedures April 22, 2013,* document number EQADR-Supplement.

Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 12).

217053113	OMS-28-GW41-20-S	SW8260CSIM	1	initial	Vinyl Chloride	6.3	ng/l	J	<LOQ

Notes:
µg/kg – micrograms per kilogram
µg/L – micrograms per liter
Conc = concentration
DF = dilution factor
ID = identification
ng/L – nanograms per liter
SDG – sample delivery group

Qualifier Codes:
J – Result reported as detected and qualified as estimated
U – Result qualified as non-detect
UJ – Result reported as non-detect and qualified as estimated.

Reason Codes
<LOQ - The reported concentration is greater than the DL but less than the LOQ
MB – Results qualified due to method blank contamination

Limited Data Validation Report

Alabama Army National Guard
Organizational Maintenance Shop #28
Mobile, Alabama
Water and Soil Samples
Collected May 2017
Analyzed by Columbia Technologies, LLC

Prepared By Joseph Capotrio
Validation Chemist/Database Coordinator

Overview

The samples analyzed for the May 2017 sampling events (limited validation) are listed in the Table of Samples Analyzed (Table 1, pages 3-10). Limited data validation was performed on a total of 172 water samples, 18 field duplicate water samples, 93 soil samples, and 8 field duplicate soil samples.

Samples were analyzed for Volatile Organic Compounds (VOCs) by SW-846 Method 8260B by Columbia Technologies, LLC, with an on-site mobile laboratory.

The Analytical Data Validation Checklist is presented as pages 11-19. Laboratory data were reviewed in accordance with directives set forth in the Alabama Army National Guard Organizational Maintenance Shop #28, Uniform Federal Policy – Quality Assurance Project Plan (UFP QAPP), authored by AECOM Technical Services, January 2016. Data were also evaluated based on validation criteria set forth in the Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories Version 5.0 (DoD July 2013), and the *USEPA CLP National Functional Guidelines for Superfund Organic Methods Data Review*, document number USEPA-540-R-08-01, June 2014 as they applied to the reported methodology. Field duplicate RPD evaluation processes were taken from the *EPA New England Environmental Data Review Supplement For Regional Data Review Elements and Superfund Specific Guidance/Procedures April 22, 2013,* document number EQADR-Supplement.

The following data components were reviewed during the limited data validation procedure:

Reviewed Deliverables/Data
Case Narratives (including any assigned laboratory flags)
Chain-of-Custody (COC) form(s) and sample integrity
Sample results, reporting limits, dilution factors
Holding times
Method (preparation) blank results
Field blank results
Laboratory control sample (LCS), laboratory control sample duplicate (LCSD) results
Matrix spike (MS), matrix spike duplicate (MSD) results
Laboratory duplicate (or spiked duplicate) results
Field duplicate (FD) results (calculated Relative Percent Differences [RPD])
Electronic data deliverables (EDDs) – EQuIS format

Data Validation Qualifiers Assigned During this Review

NR Results not selected for reporting due to more defensible results available
J Results reported as a detect and qualified as an estimated concentration
UJ Results reported as a non-detect and qualified as an estimated concentration

Assigned qualifiers are detailed in the Analytical Data Validation Checklist and are summarized in the Table of Qualified Analytical Results (page 20-23).

Overall Data Assessment

Field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness have been determined to be acceptable, based on the data submitted. No data were missing or rejected. All reported data are suitable for their intended use with the qualifications and clarifications noted.

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

Project Name: Alabama Army National Guard Organizational Maintenance Shop #28 Mobile, Alabama	Laboratory: Columbia Technologies, LLC Mobil Laboratory
Project Reference: Organizational Maintenance Shop #28 Mobile, Alabama	Sample Matrix: Water and Soil
AECOM Project: 60439687 task 2.3.	Sample Start Date: 05/02/2017
Validator/Date Validated: Joseph Capotrio 09/23/2017 (completed)	Sample End Date: 05/19/2017
Secondary Review by: Steve Szocik	Secondary Review Date: 10/3/2017
Samples Analyzed: see Table of Samples Analyzed (Table 1).	
Parameters Validated: VOCs by 8260B	
Laboratory Project IDs/Sample Delivery Groups (SDGs): 10050217, 10050317, 10050417, 10050517, 10050817, 10050917, 10051017, 10051117, 10051217, 10051317, 10051517, 10051617, 10051717, 10051817, 10051917	

PRECISION, ACCURACY, METHOD COMPLIANCE, AND COMPLETENESS ASSESSMENT

Precision:	**X**	Acceptable		Unacceptable	*JC*	Initials
Comments: Precision is the measure of variability of individual sample measurements. Field precision is determined by comparison of field duplicate sample results. Laboratory precision was determined by examination of laboratory duplicate results. Evaluation of duplicates for precision was done using the Relative Percent Difference (RPD). The RPD is defined as the difference between two duplicate samples divided by the mean and expressed as a percent. RPD limits referenced QAPP QC limits. Data that required qualification based on laboratory and calculated field duplicate RPDs, is discussed as part of items 17 and 21 respectively. One result was qualified based on a high MS/MSD RPD. However, data was not rejected based on these measurements and the overall field and laboratory precision is acceptable						
Accuracy:	**X**	Acceptable		Unacceptable	*JC*	Initials
Comments: Laboratory accuracy is a measure of the system bias, and is measured by evaluating laboratory control sample/laboratory control sample duplicate (LCS/LCSD), and organic system monitoring compounds (surrogate and internal standard) percent recoveries (%Rs). LCS/LCSD %Rs, which demonstrated the overall performance of the analytical procedure, were compared to laboratory/QAPP limits. MS/MSD %Rs, which provide information on sample matrix interferences, would be compared to laboratory/QAPP limits to evaluate matrix effects upon sample analysis. System monitoring compound or surrogate recoveries, which measured system performance and efficiency during organic analysis, were compared to laboratory/QAPP limits. Accuracy measurements are reviewed in items 12, 14, 15, and 16. Although some results were qualified for surrogate or MS recovery outliers, data was not rejected based on these measurements and the overall laboratory accuracy is acceptable.						
Method Compliance:	**X**	Acceptable		Unacceptable	*JC*	Initials
Comments: For this sample set, method compliance was determined by evaluating sample integrity and holding time against method specified requirements, while applying QAPP validation guidelines. Although some data require qualification based on estimated quantitation (see item 6), overall method compliance is acceptable based on the data reported since a majority of the data are unqualified and no data are rejected. Method compliance measurements are reviewed in items 4, 6, 8, 11, 13, 18, 19, 20 and 22 below.						
Completeness: (Continued on next page)	**X**	Acceptable		Unacceptable	*JC*	Initials

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

Comments: Completeness is the overall ratio of the number of samples planned versus the number of samples with valid analyses. Review completeness goals were set at 90-100%. Determination of completeness included a review of chain of custody records, laboratory analytical methods, and reporting limits. Completeness also included 100% review of the laboratory sample data results, QC summary reports, and EQuIS electronic data deliverables (EDDs). Any EDD modifications were made as documented in item 23.

All of the reported data are usable, some with qualification. Since no data are missing or rejected, completeness of the dataset is calculated to be 100% and is acceptable.

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

VALIDATION CRITERIA CHECK						
Data validation qualifiers assigned during this review for reportable data: NR Results not selected for reporting due to more defensible results available J Results reported as a detect and qualified as an estimated concentration UJ Results reported as a non-detect and qualified as an estimated concentration The following comments identifying sample results requiring qualification are in bold type. The other comments are of interest, but qualification of the sample results is not necessary. **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 20-23).**						
1. Did the laboratory identify any non-conformances related to the analytical results?	**X**	Yes		No	JC	Initials
Explanation by laboratory: Comments: The following items were noted in laboratory case narrative comments included in the hardcopy (or .pdf) laboratory report: Analysis times, laboratory identification (IDs), and/ or sample IDs for several samples were corrected to reflect proper times and/ or nomenclatures. Data was not affected and qualification of data was not required. Matrix interference issues were observed in surrogates for soil samples primarily collected in the 1 to 2-foot range. Selected samples were re-analyzed to confirm the matrix interference, (discussed under item #14). **SDG #10050417** - Sample OMS-28-GW17-19 result was updated report to 6.7 ug/L from 6.8 ug/L in the Final Report for rounding and significant figures. Qualification was not required. **SDG #10050217** - Sample OMS-28-GW31-31 was run on May 2nd, 2017 as an unsettled sample. The sample was allowed to settle overnight and reanalyzed on May 3rd, 2017. Both results are reported. The greater of the two results (May 3rd analysis) was selected for reporting. Data qualification, if any, related to the narrative comments and/or assigned laboratory flags contained in the analytical reports are discussed in the following sections. All assigned laboratory flags were also reviewed during the limited validation procedure.						
2. Were sample Chain-of-Custody forms complete?	**X**	Yes		No	JC	Initials
Comments: COC records from field to laboratory were complete. Custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt. For some samples, the site and/ or laboratory IDs were corrected to reflect the correct nomenclature. Data was not affected and qualification was not required.						
3. Were all the analyses requested for the samples on the COCs completed by the laboratory?	**X**	Yes		No	JC	Initials
Comments: All requested analyses as documented on original COC records were completed by the laboratory.						
4. Were samples received in good condition and at the appropriate temperature?	**X**	Yes		No	JC	Initials
Comments: Samples were hand delivered with all samples intact, in good condition, and with ice present. Cooler temperatures were not noted, however, since the samples were received the same day of collection and the cooling process had been initiated with ice, qualification of data is not required.						

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

5. Were the reported analytical methods in compliance with WP/QAPP, permit, or COC?	**X**	Yes		No	*JC*	Initials
Comments: The reported analytical methods are in compliance with COC requests and the QAPP. Compliance with permit or work plan is generally evaluated by the project manager.						
6. Were detection limits in accordance with WP/QAPP, permit, or method?	**X**	Yes		No	*JC*	Initials
Comments: Detection limits (DLs) and limits of quantitation (LOQs) are achievable by the quoted methods. Samples OMS-28-GW07-18, OMS-28-GW21-12, OMS-28-GW21-18, OMS-28-GW32-12-a, OMS-28-GW32-12, OMS-28-SB30-1, OMS-28-SB28-1, OMS-28-SB29-1, and OMS-28-SB31-1 had to be diluted due to concentrations exceeding the calibration range. Samples OMS-28-GW22-11 and OMS-28-SB24-1 were originally analyzed at a dilution due to matrix interference and were re-analyzed at greater dilutions due to concentrations exceeding the calibration range. The LOQs were raised appropriately. The following criteria were used to select results from the undiluted and diluted runs for these samples: • If results exceeded the calibration range in the initial run, the results were selected for reporting in the second run. • If results were within the calibration range and were reported as detected, the higher detected result was always selected for reporting. • If both results were reported as non-detect, the non-detect result with the lower reporting limit was selected for reporting. Samples OMS-28-GW39-13, OMS-28-GW39-20, OMS-28-GW40-13, OMS-28-GW40-20, OMS-28-SB24-3, and OMS-28-SB24-5 were originally analyzed at dilutions due to matrix interferences. The LOQs were raised appropriately. Results reported as non-detect will need to be evaluated by the end user of the data with respect to project objectives. **Sample results reported at concentrations ≥ the DL but < the LOQ require J qualifiers to indicate estimated concentrations. The analyte cannot be accurately quantitated at this trace concentration level**. **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (pages 20-23).**						
7. Do the laboratory reports include only those constituents requested to be reported for a specific analytical method?	**X**	Yes		No	*JC*	Initials
Comments: The reported target analytes are in compliance with the constituents identified on the COC. More than one analytical result was reported for some samples where both results were within the calibration range. The diluted not-needed results were NR qualified to indicate another result should be reported. The "reportable_result" field was changed from "Yes" to "No" in the database.						
8. Were sample holding times met?	**X**	Yes		No	*JC*	Initials
Comments: Sample preparation/extraction and analytical holding times were met for all samples and analyses.						
9. Were correct concentration units reported?	**X**	Yes		No	*JC*	Initials
Comments: All concentration units reported were correct.						
10. Were the reporting requirements for flagged data met?	**X**	Yes		No	*JC*	Initials
Comments: Data validation qualifiers override any assigned laboratory data flags.						
11. Were laboratory blank samples free of target analyte contamination?	**X**	Yes		No	*JC*	Initials
Comments: Laboratory blanks were free of target analyte contamination. Data qualification is not required.						

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

12. Were trip blank, field blank, and/or equipment rinse blank samples free of target analyte contamination?	**NA**	Yes	**NA**	No	*JC*	Initials
Comments: Trip blank, field blank, and equipment rinse blank samples were not collected for the data evaluated in this DVR and assessments could not be made.						
13. Were instrument calibrations within method or data validation control limits?	**NA**	Yes	**NA**	No	*JC*	Initials
Comments: For this level of limited data validation, instrument calibrations are generally not evaluated. The laboratory's project narrative was utilized to verify that instrument calibrations met acceptance criteria. The laboratory's narrative did not identify any outliers.						
14. Were surrogate recoveries within control limits?		Yes	**X**	No	*JC*	Initials

Comments: With the exception listed below, surrogate %Rs for organic analyses were within laboratory control-charted QC limits (as allowed for SW-846 methods) for all project samples and associated laboratory QC samples.

The toluene-d8 and/or 4-Bromofluorobenzene surrogate recoveries for several samples were above the acceptance limits. As the potential bias indicated by the surrogate is considered to be high, the associated results reported as non-detect were not qualified. The detected results in the associated samples listed below were qualified to reflect the potential high bias. The higher detected result was preferred for samples that were re-analyzed and exhibited %R outliers in both runs. The non-preferred results were flagged with DNR and the reportable result field changed to "No". **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 20-23).**

Sample ID	Surrogate	Limits (%)	Recovery (%)
OMS-28-SB17-2.5	Toluene-d8	88-116	119
OMS-28-SB19-1	Toluene-d8	88-116	162
	4-Bromofluorobenzene	77-122	172
OMS-28-SB19-1 (RERUN)	Toluene-d8	88-116	172
	4-Bromofluorobenzene	77-122	183
OMS-28-SB25-1	Toluene-d8	88-116	141
	4-Bromofluorobenzene	77-122	141
OMS-28-SB27-1	4-Bromofluorobenzene	77-122	124
OMS-28-SB28-1 (1X)	Toluene-d8	88-116	139
	4-Bromofluorobenzene	77-122	155
OMS-28-SB29-1 (1X)	Toluene-d8	88-116	160
	4-Bromofluorobenzene	77-122	163
OMS-28-SB30-1	Toluene-d8	88-116	164
	4-Bromofluorobenzene	77-122	175
OMS-28-SB31-1	Toluene-d8	88-116	146
	4-Bromofluorobenzene	77-122	149

% - Percent ID - Identification

The dibromofluoromethane surrogate recovery (68%) was below the acceptance limits of 84-121% and the 1,2-Dichloroethane-d4 surrogate recovery (70%) was below the acceptance limits of 66-139% for sample OMS-28-SB29-5. The sample was re-analyzed with acceptable surrogate %Rs, however the detected concentration for tetrachloroethene was much lower in the reanalysis and the original result was preferred. Detected and non-detect results were qualified to reflect the potential low bias. **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 20-23).**

15. Were laboratory control sample recoveries within control limits?	**X**	Yes		No	*JC*	Initials
Comments: Submitted LCS %Rs were within laboratory control-charted QC limits for organic target analytes as allowed for SW-846 organic methods. Data qualification is not required.						

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

16. Were matrix spike recoveries within control limits? (Continued on next page)		Yes	**X**	No	*JC*	Initials

Comments: MS/MSD %Rs from non-project samples were considered, but were not utilized to qualify project samples since matrix similarity to project samples could not be guaranteed. The following project specific samples were analyzed for MS/MSD.

OMS-28-GW01-10	OMS-28-GW18-30	OMS-28-GW43-20	OMS-28-GW65-19
OMS-28-GW08-10	OMS-28-GW19-12	OMS-28-GW11-11	OMS-28-GW34-31
OMS-28-GW03-12	OMS-28-SB16-2.5	OMS-28-GW49-18	OMS-28-GW06-17
OMS-28-GW20-19	OMS-28-GW41-12	OMS-28-GW11-30	OMS-28-GW12-18
OMS-28-SB01-1	OMS-28-SB18-5	OMS-28-SB28-3	OMS-28-SB37-3
OMS-28-SB14-3	OMS-28-GW25-28	OMS-28-GW52-12	

With the exceptions listed below, project specific MS/MSD %Rs for target analytes were within laboratory control charted QC limits.

The tetrachloroethene MSD recovery for sample OMS-28-SB28-3 was above the control limits of 46-147% with a recovery of 184% and the trichloroethene MS recovery for sample OMS-28-GW06-17 was above the control limits of 54-139% with a recovery of 146%. The results reported as detected in the associated samples were qualified as estimated to reflect the potential high bias. **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 20-23).**

17. Were duplicate RPDs and/or serial dilution %Ds within control limits?		Yes	**X**	No	*JC*	Initials

Comments: With the exceptions listed below, the RPDs for target analytes in project-specific MS/MSD and laboratory duplicate samples were within the QAPP QC limits.

The RPDs between the MS and MSD tetrachloroethene results were above the control limits of ≤40% for sample OMS-28-SB28-3 (51%). Any associated detected analytes were J qualified, and analytes not detected were not affected.

Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 20-23).

Serial Dilution %Ds: Not applicable for the methods evaluated in this SDG.

18. Were organic system performance criteria met?	**NA**	Yes	**NA**	No	*JC*	Initials

Comments: For this level of limited data validation, organic system performance data were not supplied in analytical laboratory reports. The laboratory's project narrative was utilized to verify that organic system performance requirements were met. The laboratory's narrative did not identify any outliers; therefore, data qualification was not required.

19. Were internal standards within method criteria for GC/MS sample analyses?	**NA**	Yes	**NA**	No	*JC*	Initials

Comments: For this level of limited data validation, organic system performance data are generally not evaluated. The laboratory's project narrative was utilized to verify that organic system performance requirements were met.

20. Were inorganic system performance criteria met?	**NA**	Yes	**NA**	No	*JC*	Initials

Comments: Not applicable for the methods evaluated in this SDG.

21. Were blind field duplicates collected? If so, discuss the precision (RPD) of the results.	**X**	Yes		No	*JC*	Initials

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

GW – Groundwater Sample SO – Soil Sample

Comments:

The comparison between results of the field duplicate pair met the criteria listed below.

- When both the sample and duplicate values are >5xLOQ acceptable sampling and analytical precision is indicated by an RPD between the results of ≤35% for water samples and ≤40% for soil samples.
- Where the result for one or both analytes of the field duplicate pair is <5xLOQ, satisfactory precision is indicated if the absolute difference between the field duplicate results is <2xLOQ.

Field duplicate and native sample concentrations that were both undetected are not reflected below since RPDs are not applicable.

The following RPDs were calculated:

(Continued on next page)

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

Duplicate Pair	Method	Analyte	RL	Primary Result (µg/L)	Duplicate Result ()	Units	RPD	Qualifier
OMS-28-GW11-19/ OMS-28-GW11-19a	SW8260B	Trichloroethene	1.0	24	24	µg/L	0.0	None
OMS-28-GW18-18/ OMS-28-GW18-18a		Trichloroethene	1.0	2.7	2.8	µg/L	3.6	
OMS-28-GW20-12/ OMS-28-GW20-12a		Trichloroethene	1.0	16	18	µg/L	11.8	
		Tetrachloroethene	1.0	13	13	µg/L	0.0	
OMS-28-GW32-12/ OMS-28-GW32-12a		Trichloroethene	1.0	140	180	µg/L	25	
OMS-28-GW38-12/ OMS-28-GW38-12a		Trichloroethene	1.0	12	12	µg/L	0	
		Tetrachloroethene	1.0	60	57	µg/L	5.1	
OMS-28-GW46-33/ OMS-28-GW46-33a		Trichloroethene	1.0	1.3	1.3	µg/L	0	
OMS-28-GW58-12/ OMS-28-GW58-12a		Trichloroethene	1.0	5.3	4.9	µg/L	7.8	
OMS-28-GW62-12/ OMS-28-GW62-12a		Trichloroethene	1.0	3.5	3.4	µg/L	2.9	
OMS-28-GW65-12/ OMS-28-GW65-12a		Trichloroethene	1.0	5.5	6.8	µg/L	21.1	
		Tetrachloroethene	1.0	38	48	µg/L	23.3	
OMS-28-SB19-5/ OMS-28-SB19-5a		Trichloroethene	0.002	0.0025	0.0020	mg/kg	22.2	
		Tetrachloroethene	0.002	0.0264	0.022	mg/kg	18.2	

All RPDs were within QC acceptance criteria and based on this data qualification is not required.

22. Were qualitative criteria for organic target analyte identification met?	**NA**	Yes	**NA**	No	*JC*	Initials

Comments: For this level of limited data validation – Chromatograms, library searches, and quantitation reports are generally not evaluated. The laboratory's project narrative was utilized to verify that qualitative criteria for organic target analyte identification *were met.*

23. Were 100% of the EDD concentrations and reporting limits compared to the hardcopy data reports?	**X**	Yes		No	*JC*	Initials

Comments: The EDD entries were resolved with the hardcopy data results and corrected as necessary. According to validation protocol, the hardcopy data report was accepted as the correct reference. Qualifiers and reason codes were added to the EDD files for all reportable data. The four EQuIS EDD files were formatted for upload once data validation secondary review is completed.

Additional edits made to the EDD files by the Database Manager prior to data upload are listed below.

Unique sys_loc_codes were assigned to all samples. In order to upload multiple SDGs under one EDD, SDG numbers were appended to all laboratory QC data and dates were appended to trip blank samples in order to keep them unique. Parent sample designations were made for all LCS/LCSD and field duplicate samples. MS/MSD and laboratory duplicate samples already had pre-assigned parent sample designations which were verified using the hard copy laboratory report.

Updated the Analysis entries from "000" to "Initial".

A task_code field was assigned, "OMS28_GW_SO_May2017".

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

24. General Comments: Laboratory data were reviewed in accordance with directives set forth in the Alabama Army National Guard Organizational Maintenance Shop #28, Uniform Federal Policy – Quality Assurance Project Plan (UFP QAPP), authored by AECOM Technical Services, January 2016. Data were also evaluated based on validation criteria set forth in the Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories Version 5.0 (DoD July 2013), and *USEPA CLP National Functional Guidelines for Superfund Organic Methods Data Review*, document number USEPA-540-R-08-01, June 2008, as they applied to the reported methodology. Field duplicate RPD evaluation processes were taken from the *EPA New England Environmental Data Review Supplement For Regional Data Review Elements and Superfund Specific Guidance/Procedures April 22, 2013,* document number EQADR-Supplement.

Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 20-23).

Notes:
mg/kg – milligrams per kilogram
µg/L – micrograms per liter
Conc – concentration
DF – dilution factor
ID – identification
PCT_REC – percent recovery
SDG – sample delivery group

Qualifier Codes:
J – Result reported as detected and qualified as estimated.
NR – Result was not selected for reporting.
UJ – Result reported as non-detect and qualified as estimated.

Reason Codes
<LOQ - The reported concentration is greater than the DL but less than the LOQ.
DUP – Results qualified due to duplicate RPDs outside the control limits.
DNR – Do not report due to more defensible data available.
MS – Results qualified due to matrix spike recovery outside the control limits.
SUR – Results qualified due to surrogate recovery outside the control limits.

Organic
Limited Data Validation Report

Alabama Army National Guard
Organizational Maintenance Shop #28
Mobile, Alabama
Water Samples
Collected January & February 2018
Analyzed by GCAL Analytical Laboratories, LLC

Prepared By Joseph Capotrio
Validation Chemist/Database Coordinator

Overview

The samples analyzed for the January & February 2018 sampling events (limited validation) are listed in the Table of Samples Analyzed (Table 1, pages 3-6). Limited data validation was performed on a total of 49 water samples, 5 field duplicate water samples, and 5 associated trip blank samples.

Samples were analyzed for Volatile Organic Compounds (VOCs) by SW-846 Method 8260B by GCAL Analytical Laboratories, LA and VOCs by EPA Method 8260C-SIM by Katahdin analytical Services, Scarborough, ME.

The Analytical Data Validation Checklist is presented as pages 7-12. Laboratory data were reviewed in accordance with directives set forth in the Alabama Army National Guard Organizational Maintenance Shop #28, Uniform Federal Policy – Quality Assurance Project Plan (UFP QAPP), authored by AECOM Technical Services, January 2016. Data were also evaluated based on validation criteria set forth in the Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories Version 5.0 (DoD July 2013), and the *USEPA CLP National Functional Guidelines for Superfund Organic Methods Data Review*, document number USEPA-540-R-08-01, June 2014 as they applied to the reported methodology. Field duplicate RPD evaluation processes were taken from the *EPA New England Environmental Data Review Supplement For Regional Data Review Elements and Superfund Specific Guidance/Procedures April 22, 2013,* document number EQADR-Supplement.

The following data components were reviewed during the limited data validation procedure:

Reviewed Deliverables/Data
Case Narratives (including any assigned laboratory flags)
Chain-of-Custody (COC) form(s) and sample integrity
Sample results, reporting limits, dilution factors
Holding times
Method (preparation) blank results
Field blank results
Laboratory control sample (LCS), laboratory control sample duplicate (LCSD) results
Matrix spike (MS), matrix spike duplicate (MSD) results
Laboratory duplicate (or spiked duplicate) results
Field duplicate (FD) results (calculated Relative Percent Differences [RPD])
Electronic data deliverables (EDDs) – EQuIS format

Data Validation Qualifiers Assigned During this Review

J Results reported as a detect and qualified as an estimated concentration

Assigned qualifiers are detailed in the Analytical Data Validation Checklist and are summarized in the Table of Qualified Analytical Results (page 13).

Overall Data Assessment

Field and laboratory precision, field and laboratory accuracy, method compliance, and data set completeness have been determined to be acceptable, based on the data submitted. No data were missing or rejected. All reported data are suitable for their intended use with the qualifications and clarifications noted.

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

Project Name: Alabama Army National Guard Organizational Maintenance Shop #28 Mobile, Alabama	Laboratory: GCAL Analytical Laboratories, LLC and Katahdin Analytical Services — Scarborough, ME
Project Reference: Organizational Maintenance Shop #28 Mobile, Alabama	Sample Matrix: Water
AECOM Project: 60556081 task 3.0	Sample Start Date: 01/29/2018
Validator/Date Validated: Joseph Capotrio 02/23/2018 (completed)	Sample End Date: 02/06/2018
Secondary Review by: Steve Szocik	Secondary Review Date: 2/28/2018
Samples Analyzed: see Table of Samples Analyzed (Table 1).	
Parameters Validated: VOCs by 8260B and 8260C-SIM	
Laboratory Project IDs/Sample Delivery Groups (SDGs): 218013009 (SL0744), 218013015, 218013129, 218013130, 218013133 (SL0777), 218020203 (SL0867), 218020242, 218020614 (SL952), 218020615, 218020702 (SL0996), 218020725	

PRECISION, ACCURACY, METHOD COMPLIANCE, AND COMPLETENESS ASSESSMENT

Precision:	**X**	Acceptable		Unacceptable	*JC*	Initials
Comments: Precision is the measure of variability of individual sample measurements. Field precision is determined by comparison of field duplicate sample results. Laboratory precision was determined by examination of laboratory duplicate results. Evaluation of duplicates for precision was done using the Relative Percent Difference (RPD). The RPD is defined as the difference between two duplicate samples divided by the mean and expressed as a percent. RPD limits referenced EPA published QC limits. Precision measurements are reviewed in items 17 and 21. Data was not qualified or rejected based on these measurements and the overall field and laboratory accuracy is acceptable.						
Accuracy:	**X**	Acceptable		Unacceptable	*JC*	Initials
Comments: Field accuracy, a measure of the sampling bias, is generally determined by reviewing trip blank results for evidence of sample contamination stemming from sampling activities and/or sample transport/bottle contamination in applicable methods. Laboratory accuracy is a measure of the system bias, and is measured by evaluating laboratory control sample/laboratory control sample duplicate (LCS/LCSD), and organic system monitoring compounds (surrogate and internal standard) percent recoveries (%Rs). LCS/LCSD %Rs, which demonstrated the overall performance of the analytical procedure, were compared to QAPP limits. MS/MSD %Rs, which provide information on sample matrix interferences, would be compared to QAPP limits, EPA published QC limits or laboratory control charted limits to evaluate matrix effects upon sample analysis. System monitoring compound or surrogate recoveries, which measured system performance and efficiency during organic analysis, were compared to QAPP limits. Accuracy measurements are reviewed in items 12, 14, 15, and 16. Data was not qualified or rejected based on these measurements and the overall field and laboratory accuracy is acceptable.						
Method Compliance:	**X**	Acceptable		Unacceptable	*JC*	Initials
Comments: For this sample set, method compliance was determined by evaluating sample integrity and holding time against method specified requirements, while applying QAPP validation guidelines. Although some data require qualification based on estimated quantitation (see item 6), overall method compliance is acceptable based on the data reported since a majority of the data are unqualified and no data are rejected. Method compliance measurements are reviewed in items 4, 6, 8, 11, 13, 18, 19, 20 and 22 below.						
Completeness: (Continued on next page)	**X**	Acceptable		Unacceptable	*JC*	Initials

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

Comments: Completeness is the overall ratio of the number of samples planned versus the number of samples with valid analyses. Review completeness goals were set at 90-100%. Determination of completeness included a review of chain of custody records, laboratory analytical methods, and reporting limits. Completeness also included 100% review of the laboratory sample data results, QC summary reports, and EQuIS electronic data deliverables (EDDs). Any EDD modifications were made as documented in item 23.

All of the reported data are usable, some with qualification. Since no data are missing or rejected, completeness of the dataset is calculated to be 100% and is acceptable.

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

VALIDATION CRITERIA CHECK						
Data validation qualifiers assigned during this review for reportable data: J estimated concentration The following comments identifying sample results requiring qualification are in bold type. The other comments are of interest, but qualification of the sample results is not necessary. **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 13).**						
1. Did the laboratory identify any non-conformances related to the analytical results?	**X**	Yes		No	*JC*	Initials
Explanation by laboratory: Comments: The following items were noted in laboratory case narrative comments included in the hardcopy (or .pdf) laboratory report: **SDG #218013009 (SL0744) & 218013133 (SL0777)** – The vinyl chloride continuing calibration verification (CCV) D0174 response was above the acceptance limits of ±50%. The Department of Defense (DoD) Quality Standard Manual (QSM) allows for the analysis of two additional CCVs that do not need to be within the 12 hour window. The laboratory analyzed two additional CCV's, D0175 and D0176, which were acceptable. Further Action was not required. Data qualification, if any, related to the narrative comments and/or assigned laboratory flags contained in the analytical reports are discussed in the following sections. All assigned laboratory flags were also reviewed during the limited validation procedure.						
2. Were sample Chain-of-Custody forms complete?	**X**	Yes		No	*JC*	Initials
Comments: COC records from field to laboratory were complete. Custody was maintained as evidenced by field and laboratory personnel signatures, dates, and times of receipt.						
3. Were all the analyses requested for the samples on the COCs completed by the laboratory?	**X**	Yes		No	*JC*	Initials
Comments: All requested analyses as documented on original COC records were completed by the laboratory.						
4. Were samples received in good condition and at the appropriate temperature?		Yes	**X – no effect**	No	*JC*	Initials
Comments: With the exceptions listed below, samples were received on ice, intact, and in good condition. Cooler temperatures were within the 0-6°C acceptance range as noted in the Sample Condition Upon Receipt form and on the COC. Data qualification is not needed. **SDG #218020614 (SL0952) –** The samples were received by the laboratory at a temperature of -1.4°C, below the method required acceptance range. The laboratory did not note that the samples were freezing and there was no ice present in the samples; therefore, sample integrity was unlikely affected. Further Action was not required.						
5. Were the reported analytical methods in compliance with WP/QAPP, permit, or COC?	**X**	Yes		No	*JC*	Initials
Comments: The reported analytical methods are in compliance with COC requests and the QAPP. Compliance with permit is generally evaluated by the project manager.						

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

6. Were detection limits in accordance with WP/QAPP, permit, or method?	**X**	Yes		No	*JC*	Initials
Comments: Detection limits (DLs) and limits of quantitation (LOQs) are achievable by the quoted methods. Sample OMS-28-GW85-19 had to be diluted due to concentrations exceeding the calibration range. The LOQs were raised appropriately. The tetrachloroethene result was reported as non-detect at an elevated reporting limit and will need to be evaluated by the end user of the data with respect to meeting project standards. No data qualification is required. **Sample results reported at concentrations ≥ the DL but < the LOQ require J qualifiers to indicate estimated concentrations. The analyte cannot be accurately quantitated at this trace concentration level**. **Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (pages 13).**						
7. Do the laboratory reports include only those constituents requested to be reported for a specific analytical method?	**X**	Yes		No	*JC*	Initials
Comments: The reported target analytes are in compliance with the constituents identified on the COC.						
8. Were sample holding times met?	**X**	Yes		No	*JC*	Initials
Comments: Sample preparation/extraction and analytical holding times were met for all samples and analyses.						
9. Were correct concentration units reported?	**X**	Yes		No	*JC*	Initials
Comments: All concentration units reported were correct.						
10. Were the reporting requirements for flagged data met?	**X**	Yes		No	*JC*	Initials
Comments: Data validation qualifiers override any assigned laboratory data flags.						
11. Were laboratory blank samples free of target analyte contamination?	**X**	Yes		No	*JC*	Initials
Comments: Laboratory blanks were free of target analyte contamination.						
12. Were trip blank, field blank, and/or equipment rinse blank samples free of target analyte contamination?	**X**	Yes		No	*JC*	Initials
Comments: Field blank and equipment rinse blank samples were not collected for the data evaluated in this report. The trip blank samples were free of target analyte contamination. Data qualification is not required.						
13. Were instrument calibrations within method or data validation control limits?		Yes	**X – no effect**	No	*JC*	Initials
Comments: For this level of limited data validation, instrument calibrations are generally not evaluated. However, the laboratory's project narrative was utilized to verify that instrument calibrations met acceptance criteria. The laboratory's narrative for lab reports SDG #218013009 (SL0744) & 218013133 (SL0777) noted a calibration verification analysis greater than the control limits (Section 1). The remaining laboratory narratives did not identify outliers. Qualification was not required as the affected calibration verification was re-analyzed in accordance with the DoD QSM.						
14. Were surrogate recoveries within control limits?	**X**	Yes		No	*JC*	Initials
Comments: Surrogate %Rs for organic analyses were within laboratory control-charted QC limits (as allowed for SW-846 methods) for all project samples and associated laboratory QC samples.						

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

15. Were laboratory control sample recoveries within control limits?	**X**	Yes		No	*JC*	Initials
Comments: Submitted LCS %Rs were within laboratory control-charted QC limits for organic target analytes as allowed for SW-846 organic methods. Data qualification is not required.						
16. Were matrix spike recoveries within control limits?	**X**	Yes		No	*JC*	Initials
Comments: MS/MSD %Rs from non-project samples were considered, but were not utilized to qualify project samples since matrix similarity to project samples could not be guaranteed. When analyzed, project specific MS/MSD %Rs for target analytes were within laboratory control charted QC limits.						
17. Were duplicate RPDs and/or serial dilution %Ds within control limits?	**X**	Yes		No	*JC*	Initials
Comments: The RPDs for target analytes in project-specific MS/MSD and laboratory duplicate samples were within the QAPP or QSM QC limits. Serial Dilution %Ds: Not applicable for the methods evaluated in this SDG.						
18. Were organic system performance criteria met?	**NA**	Yes	**NA**	No	*JC*	Initials
Comments: For this level of limited data validation, organic system performance data were not supplied in analytical laboratory reports. The laboratory's project narrative was utilized to verify that organic system performance requirements were met. The laboratory's narrative did not identify any outliers; therefore, data qualification was not required.						
19. Were internal standards within method criteria for GC/MS sample analyses?	**NA**	Yes	**NA**	No	*JC*	Initials
Comments: For this level of limited data validation, organic system performance data are generally not evaluated. The laboratory's project narrative was utilized to verify that organic system performance requirements were met.						
20. Were inorganic system performance criteria met?	**NA**	Yes	**NA**	No	*JC*	Initials
Comments: Not applicable for the methods evaluated in this SDG.						
21. Were blind field duplicates collected? If so, discuss the precision (RPD) of the results.	**X**	Yes		No	*JC*	Initials

Comments: The following table lists the field duplicate samples collected. Field duplicate RPDs were within data validation QC limits of ≤35% for water matrices when the result is > 5X the LOQ, or RPDs were within ± 2X the LOQ or were undetected in both samples. Field duplicate and native sample concentrations that were both undetected are not reflected below since RPDs are not applicable.

SDG	Primary Sample ID	Duplicate Sample ID	Sample Date	Sample Time
218020203/ 218020242	OMS-28-GW76-28	OMS-28-GW76-28-a	1/31/2018	11:55
	OMS-28-GW77-12	OMS-28-GW77-12-a	2/1/2018	13:15
218020614/	OMS-28-GW83-16	OMS-28-GW83-16-A	2/2/2018	16:00
218020615	OMS-28-GW84-12	OMS-28-GW84-12-A	2/5/2018	11:25
218020702/ 218020725	OMS-28-GW92-33	OMS-28-GW92-33-A	2/6/2018	11:30

(Continued on next page)

ANALYTICAL LIMITED DATA VALIDATION CHECKLIST

The following RPDs were calculated:

Duplicate Pair	Method	Unit	Analyte	RPD	LOQ	Primary Result (µg/L)	Duplicate Result (µg/L)	Qualifier
SDG# 218020615								
OMS-28-GW83-16-A/	SW8260B	UG/L	cis-1,2-Dichloroethene	3.8%	1.0	1.28	1.33	None
OMS-28-GW83-16	SW8260B	UG/L	Trichloroethene	1.0%	1.0	51.3	51.8	None

Definitions:
LOQ –limit of quantitation
RPD – relative percent difference
SDG –sample delivery group
ug/L- micrograms per liter

All RPDs were within QC acceptance criteria and data qualification is not required.

22. Were qualitative criteria for organic target analyte identification met?	**NA**	Yes	**NA**	No	*JC*	Initials

Comments: For this level of limited data validation – Chromatograms, library searches, and quantitation reports are generally not evaluated. The laboratory's project narrative was utilized to verify that qualitative criteria for organic target analyte identification *were met.*

23. Were 100% of the EDD concentrations and reporting limits compared to the hardcopy data reports?	**X**	Yes		No	*JC*	Initials

Comments: The EDD entries were resolved with the hardcopy data results and corrected as necessary. According to validation protocol, the hardcopy data report was accepted as the correct reference. Qualifiers and reason codes were added to the EDD files for all reportable data. The four EQuIS EDD files were formatted for upload once data validation secondary review is completed.

Additional edits made to the EDD files by the Database Manager prior to data upload are listed below.

Unique sys_loc_codes were assigned to all samples. In order to upload multiple SDGs under one EDD, SDG numbers were appended to all laboratory QC data and dates were appended to trip blank samples in order to keep them unique. Parent sample designations were made for all LCS/LCSD and field duplicate samples. MS/MSD and laboratory duplicate samples already had pre-assigned parent sample designations which were verified using the hard copy laboratory report.

Updated the Analysis entries from "000" to "Initial".

A task_code field was assigned, "2018_GW Samples from Temp wells".

24. General Comments: Laboratory data were reviewed in accordance with directives set forth in the Alabama Army National Guard Organizational Maintenance Shop #28, Uniform Federal Policy – Quality Assurance Project Plan (UFP QAPP), authored by AECOM Technical Services, January 2016. Data were also evaluated based on validation criteria set forth in the Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories Version 5.0 (DoD July 2013), and *USEPA CLP National Functional Guidelines for Superfund Organic Methods Data Review*, document number USEPA-540-R-08-01, June 2008, as they applied to the reported methodology. Field duplicate RPD evaluation processes were taken from the *EPA New England Environmental Data Review Supplement For Regional Data Review Elements and Superfund Specific Guidance/Procedures April 22, 2013,* document number EQADR-Supplement.

Refer to the Table of Qualified Analytical Results for a listing of the samples, analytes, and concentrations qualified (page 13).

Electrical Conductivity (EC)
EC continuously measures soil electrical conductivity by transmitting a low level alternating electrical current through the soil between electrically isolated sensfor pins of the probe and the probe body. The voltage response of the imposed current to the soil is measured across these same two points. Conductivity, the inverse of resistivity, is measured in milliSiemens/meter (mS/m). The probe is reasonably accurate in the range of 5 to 400 mS/m. In general lower conductivity values are characteristic of larger grain soil types while higher conductivities are characteristic of finer sized particles such as finer sand, silts, and clays.

Hydraulic Profile Tool (HPT)
HPT continuously measures the hydraulic conductivity of the soil by injecting the constant flow of water through a small stainless steel screen into the soil formation and measuring the hydraulic pressure at both the pump source and the injection port vs. depth. The flow rate of the water into the soil formation is also measured and recorded in milliliters per minute (mL/min) versus depth. Static formation hydraulic pressure measurements (dissipation tests) can also be made by stopping at discrete intervals to determine the static water level. The HPT software can also provide an estimate of K (a value used in hydrogeologic calculations) to provide an interpretation of the hydraulic permeability of the formation.

Membrane Interface Probe (MIP)
MIP continuously measures total chemical detector response to volatile organic compounds (VOCs) vs. depth. The operating principle is based on heating the soil and/or water around a semi-permeable polymer membrane to 121° Celsius (C), volatilizing VOCs that then partition across this membrane. Nitrogen is used as an inert carrier gas, and travels from a surface supply down a transfer tubing which sweeps across the back of the membrane and returns any captured VOCs to the installed detectors at the surface. It takes approximately 60 seconds for the nitrogen gas stream to travel through 50 meters of inert tubing and reach the detectors (see detectors below). Detector response is recorded in microvolts vs. depth. The MIP can be used in saturated or unsaturated soils, as water does not pass through the membrane.

Photo Ionization Detector (PID)
The PID consists of a special 10.2 electron volt (eV) ultraviolet lamp that emits sufficient energy to ionize most aromatics such as benzene, toluene, xylene, etc., and many other molecules with an ionization potential below 10.2 eV. The PID also emits a response for chlorinated compounds containing double-bonded carbons (halogenated ethylenes), such as trichloroethylene (TCE) and tetrachloroethylene (PCE).

Flame Ionization Detector (FID)
The FID utilizes a hydrogen flame to combust compounds in the carrier gas and responds to any molecule with a carbon-hydrogen bond.

Halogen Specific Detector (XSD)
The XSD consists of a ceramic probe, platinum wire (anode) and platinum bead (cathode) mounted inside a high temperature reactor. The XSD is sensitive and provides a linear response to the quantity of halogen.

Electron Capture Detector (ECD)
The ECD detector consists of a sealed stainless steel cylinder containing radioactive Nickel-63, similar to a household smoke detector, that emits beta particles (electrons), which collide with the instrument carrier gas molecules, ionizing them in the process. When electro-negative compounds including chlorinated, fluorinated, or brominated molecules enter the cell, they immediately combine with the free electrons and provide a detector response. The ECD response is non-linear and variable depending on the atomic structure of the compound detected.

Low Level MIP (LL-MIP)
LL MIP can greatly increase the sensitivity of the MIP logging tool. The primary feature of LL MIP technology is that the carrier gas stream that sweeps the internal surface of the MIP membrane is pulsed. This results in an increase in the concentration of VOC contaminant delivered to the MIP detectors. This technology can provide the ability to track and map contaminant plumes down to concentrations at or below the 100 ppb range for some contaminants. Performance is highly dependent on the condition of the MIP system and the sensitivity of the installed detectors.

Laser Induced Fluorescence - UltraViolet Optical Scanning Tool (LIF-UVOST®)
The LIF/UVOST® system uses a high- energy laser to produce an ultraviolet light source for the detection of polycyclic aromatic hydrocarbons (PAHs). The LIF/ UVOST® system employs a excitation beam of light from a XeCl laser at 308 nm light pulsed at 50 megahertz. Any residual phase PAHs present in the soil grains will absorb this photon energy in the form of fluorescence. This fluorescence is returned to the optical detection system via a second silica fiber optic line, measured, and recorded in real time across four specific wavelengths, namely 350, 400, 450, and 500 nm. Individual LIF/UVOST® logs consist of a primary graph of total fluorescence as a percentage of a Reference Emitter (RE) test standard versus depth, an information box and up to five waveform callouts. These callouts present the fluoresce intensity of each of the monitored wavelengths on the Y-axis (in microvolts (uV)). The four peaks are due to the fluorescence at the four monitored wavelengths called channels. Each channel is assigned a color. Various NAPLs will have a unique waveform signature based on the relative amplitude of the four channels and/or the broadening of one or more of the channels. Performance Testing: All detector systems are tested before and after each survey location to verify proper system response to known reference values. Records of these performance tests are kept with the project and system operating logs. UVOST® is a registered trademark of Dakota Technologies, Inc.
